Framing Portraits, Binding Albums Shilpi Goswami, Suryanandini Narain, (eds.), 2025-01-06. Long neglected in academic discourse in India, family photographs make a silent contribution to the histories of photography, marginality, and the family. In this volume, the writers dwell on the importance of family photographs and their visual omnipresence in our daily lives. They point out how family photographs have belonged to the vernacular material of visual culture, more seen and lived with than less written and consciously thought about. Attempting to retrieve family photographs from a space of neglect, this volume demonstrates how they are fundamental to the microhistories of a nation and its many societies and suggests the importance of such counterarguments to the dominant strains in an emerging discursive space. The essays do not offer a comprehensive survey of all types of family photographs in India. Instead, they present focused insights into chosen areas of interest on the part of the writers. Collectively, they embrace the intersectionalities of gender, caste, class, and regional trajectories, making the politics of representation even more layered with contestations between the historical, oral, and affective memorialisation surrounding family archives and photographs. These concerns centrally inform the essays as they accept and negotiate a terrain shared by all types of narrativisation.

Computer Vision Richard Szeliski, 2022-01-03. *Computer Vision: Algorithms and Applications* explores the variety of techniques used to analyze and interpret images. It also describes challenging real-world applications where vision is being successfully used both in specialized applications such as image search and autonomous navigation, as well as for fun, consumer-level tasks that students can apply to their own personal photos and videos. More than just a source of recipes, this exceptionally authoritative and comprehensive textbook/reference takes a scientific approach to the formulation of computer vision problems. These problems are then analyzed using the latest classical and deep learning models and solved using rigorous engineering principles. Topics and features: Structured to support active curricula and project-oriented courses with tips in the Introduction for using the book in a variety of customized courses. Incorporates totally new material on deep learning and

applications such as mobile computational photography autonomous navigation and augmented reality Presents exercises at the end of each chapter with a heavy emphasis on testing algorithms and containing numerous suggestions for small mid term projects Includes 1 500 new citations and 200 new figures that cover the tremendous developments from the last decade Provides additional material and more detailed mathematical topics in the Appendices which cover linear algebra numerical techniques estimation theory datasets and software Suitable for an upper level undergraduate or graduate level course in computer science or engineering this textbook focuses on basic techniques that work under real world conditions and encourages students to push their creative boundaries Its design and exposition also make it eminently suitable as a unique reference to the fundamental techniques and current research literature in computer vision
