

Evolution of the whale.

Pakicetus: 48 Million years ago.

- Foraged in streams.
- 1.75 meters long.
- Nostrils far forward.
- Forelimbs and hind limbs functioned for walking.
- No tail flukes.

Ambulocetus: 47 million years ago.

- Alligator like, fed in the water.
- 4.15 meters long.
- Forelimbs and hind limbs function for walking.
- No tail flukes.

Maiacetus: 46 Million years ago.

- Sea lion like, spent some time on land but most time in water.
- 3 meters long.
- Forelimbs function for swimming and walking.
- Large hind limbs used for swimming and walking.
- No tail flukes.

Dorudon: 37 Million years ago.

- Completely aquatic.
- 4.5 meters long.
- Nostrils moved farther back on skull.
- Forelimbs become flippers.
- Elongation of the trunk.
- Hind limbs reduced in size.
- Tail flukes now present.

Llanocetus: 34 Million years ago.

- Completely aquatic.
- 9-10 meters long.
- Teeth reduced.
- First evidence of baleen for filter feeding.

Animal Evolution Maximilian J. Telford, D. Timothy J. Littlewood, 2009-08-13 Describing and understanding the evolution of the diversity of bodyplans is a major goal of evolutionary biology Taking a modern integrated approach to this question a group of leading researchers describe how modern techniques and disciplines have been combined resulting in a dramatic renaissance in the study of animal evolution

Old Questions and Young Approaches to Animal Evolution José M. Martín-Durán, Bruno C. Vellutini, 2019-07-22 Animal evolution has always been at the core of Biology but even today many fundamental questions remain open The field of animal evo devo is leveraging recent technical and conceptual advances in development paleontology genomics and transcriptomics to propose radically different answers to traditional evolutionary controversies This book is divided into four parts each of which approaches animal evolution from a different perspective The first part chapters 2 and 3 investigates how new sources of evidence have changed conventional views of animal origins while the second chapters 4 8 addresses the connection between embryogenesis and evolution and the genesis of cellular tissue and morphological diversity The third part chapters 9 and 10 investigates how big data in molecular biology is transforming our understanding of the mechanisms governing morphological change in animals In closing the fourth part chapters 11 13 explores new theoretical and conceptual approaches to animal evolution Old questions and young approaches to animal evolution offers a comprehensive and updated view of animal evolutionary biology that will serve both as a first step into this fascinating field for students and university educators and as a review of complementary approaches for researchers

Animal cell type diversity, evolution and regulation Sebé-Pedrós, Arnau, 2023-01-26 A fundamental question in biology is how the myriad of specialized cell behaviors observed in a multicellular organism is encoded by a single genome sequence and which gene regulatory mechanisms orchestrate the spatiotemporal deployment and maintenance of these cell type specific programs Decades of genetic and more recently genomic analyses have identified multiple layers of regulation including specific molecular players and their interactions This regulation ultimately results in cell specific gene expression profiles that define coordinated cell cooperation at the tissue and whole organism levels However the diversity and evolutionary dynamics of cell types remain almost completely unexplored beyond selected tissues in a few species and so it is the gene regulatory networks that define them Similarly little is known about the emergence of complex genome regulatory mechanisms that support cell type specific programs and cellular memory including genome spatial compartmentalization and chromatin dynamics The advent of low input highly multiplexed epigenomic and transcriptomic profiling methods even at single cell resolution and the broad applicability of these techniques to diverse

systems bypasses the need to obtain large amounts of biological material by culturing or dissecting particular tissues or cell types. This paves the way for the comparative multi level analysis of cell differentiation in species and ontogenetic stages that span an unprecedented phylogenetic breadth and represent diverse levels of biological complexity ranging from unicellular temporal differentiation dynamics and simple multicellular behaviors as in some protistan eukaryotes through loosely integrated and limitedly diversified ensembles of cell types as in early branching animals to organisms with elaborate tissue and body plan organization as in bilaterian animals. The comparative approach through the prism of evolutionary theory and supported by a robust phylogenetic framework holds the promise of offering far reaching insights into the fundamental principles that govern cell biological systems and the associated molecular mechanisms of genome regulation.

Key Transitions in Animal Evolution Rob Desalle, Bernd Schierwater, 2010-12-07 Tackling one of the most difficult and delicate of the evolutionary questions this challenging book summarizes the more recent results in phylogenetics and developmental biology that address the evolution of key innovations in metazoans. Divided into three sections the first considers the phylogenetic issues involving this area of the tree of life.

Evolution and the Diversity of Life Ernst Mayr, 1997 The diversity of living forms and the unity of evolutionary processes are themes that have permeated the research and writing of Ernst Mayr a Grand Master of evolutionary biology. The essays collected here are among his most valuable and durable contributions that form the basis for much of the contemporary understanding of evolutionary biology.

EBOOK: Biology Peter Raven, George Johnson, Kenneth Mason, Jonathan Losos, Susan Singer, 2013-02-16 Committed to Excellence in the Landmark Tenth Edition This edition continues the evolution of Raven Johnson's Biology. The author team is committed to continually improving the text keeping the student and learning foremost. We have integrated new pedagogical features to expand the students learning process and enhance their experience in the ebook. This latest edition of the text maintains the clear accessible and engaging writing style of past editions with the solid framework of pedagogy that highlights an emphasis on evolution and scientific inquiry that have made this a leading textbook for students majoring in biology and have been enhanced in this landmark Tenth edition. This emphasis on the organizing power of evolution is combined with an integration of the importance of cellular molecular biology and genomics to offer our readers a text that is student friendly and current. Our author team is committed to producing the best possible text for both student and faculty. The lead author Kenneth Mason University of Iowa has taught majors biology at three different major public universities for

more than fifteen years Jonathan Losos Harvard University is at the cutting edge of evolutionary biology research and Susan Singer Carleton College has been involved in science education policy issues on a national level All three authors bring varied instructional and content expertise to the tenth edition of Biology

Evolution, Origin of Life, Concepts and Methods Pierre Pontarotti, 2019-10-01 This book presents 15 selected contributions to the 22nd Evolutionary Biology Meeting which took place in September 2018 in Marseille They are grouped under the following major themes Origin of Life Concepts and Methods Genome and Phenotype Evolution The aims of these annual meetings in Marseille are to bring together leading evolutionary biologists and other scientists who employ evolutionary biology concepts e g for medical research and to promote the exchange of ideas and encourage interdisciplinary collaborations Offering an up to date overview of recent advances in the field of evolutionary biology this book represents an invaluable source of information for scientists teachers and advanced students

Animal Eyes Michael F. Land, Dan-Eric Nilsson, 2012-03 This book covers the way that all known types of eyes work from their optics to the behaviour they guide The ways that eyes sample the world in space and time are considered and the evolutionary origins of eyes are discussed This new edition incorporates discoveries made since the first edition published in 2001

Compassion and Healing in Medicine

and Society Gregory Fricchione, 2011-12 Reconciling the scientific principles of medicine with the love essential for meaningful care is not an easy task but it is one that Gregory L. Fricchione performs masterfully in *Compassion and Healing in Medicine and Society*. At the core of this book is a thought provoking analysis of the relationship between evolutionary science and neuroscience. Fricchione theorizes that the cries for attachment made by seriously ill patients reflect an underlying evolutionary tenet called the separation challenge attachment solution process. The pleadings of patients he explains are verbal expressions of the history of evolution itself. By exploring the roots of a patient's attachment needs we come face to face with a critical component of natural selection and the evolutionary process. Medicine engages with the separation challenge attachment solution process on many levels of scientific knowledge and human meaning and healing. Fricchione applies these concepts to medical care and encourages physicians to fully understand them so they can better treat their patients. Compassionate humanistic care promotes physical, emotional and spiritual healing precisely because it is consonant with how life, the brain and humanity have evolved. It is therefore not a luxury of modern medical care but an essential part of it. Fricchione advocates an attachment based medical system one in which physicians evaluate stress and resiliency and prescribe an integrative treatment plan for the whole person designed to accentuate the propensity to health. There is a wisdom or perennial philosophy based on compassionate love that Fricchione stresses the medical community must take advantage of in designing future health care and society must appreciate as it faces its separation challenges.

Basic Concepts and Recent Advances in Microbial Diversity, Taxonomy, Speciation and Evolution Suchitra Godbole, Dhara P. Sachdev, 2024-03-05 This book delves into the fundamental principles that underpin the classification and understanding of bacteria from the basic concepts to the latest advances. This book encompasses numerous topics related to diversity such as speciation and evolution of species, microbial diversity and methods for estimating diversity and taxonomy of bacteria. The reader can gain valuable insights into the cutting edge techniques used to identify and classify bacteria such as genomics, metagenomics and phylogenetic analysis. With expert contributions from leading scientists, this comprehensive guide offers a holistic view of the microbial world in the context of their role in global biodiversity and explores the upcoming role of machine learning and artificial intelligence for exploration of bacterial diversity. For students and researchers in microbiology, genetics and biotechnology, this book is an essential resource for unravelling the mysteries of bacterial speciation, evolution, diversity and taxonomy.

Introduction to Anthropology Jennifer Hasty, David G. Lewis, Marjorie M. Snipes, 2024-09-16 Designed to meet the scope and sequence of your course, *Introduction to Anthropology* is a four-field text integrating diverse voices, engaging field activities and meaningful themes like Indigenous experiences and social inequality to engage students and enrich learning. The text showcases the historical context of the discipline with a strong focus on anthropology as a living and evolving field. There is significant discussion of recent efforts to make the field more diverse in its practitioners, the questions it asks and in the applications of anthropological research to address contemporary

challenges In addressing social inequality the text drives readers to consider the rise and impact of social inequalities based on forms of identity and difference such as gender ethnicity race and class as well as oppression and discrimination The contributors to and dangers of socioeconomic inequality are fully addressed and the role of inequality in social dysfunction disruption and change is noted This is an adaptation of Introduction to Anthropology by OpenStax You can access the textbook as pdf for free at openstax org Minor editorial changes were made to ensure a better ebook reading experience Textbook content produced by OpenStax is licensed under a Creative Commons Attribution 4 0 International License
