on the reduction of global warming energy saving and energy security are also discussed This book also focuses on energy management and conservation strategies for better utilization of energy sources and technologies in buildings and industry as well as ways of improving energy efficiency at the end use and introduces basic methods for designing and sizing cost effective systems and determining whether it is economically efficient to invest in specific energy efficiency or renewable energy projects and describes energy audit producers commonly used to improve the energy efficiency of residential and commercial buildings as well as industrial facilities These features and more provide the tools necessary to reduce global warming and to improve energy management leading to higher energy efficiencies In order to reduce the negative effects of global warming due to excessive use of fossil fuel technologies the following alternative technologies are introduced from the engineering perspective fuel cells solar power generation technologies energy recovery technologies hydrogen energy technologies wind energy technologies geothermal energy technologies and biomass energy technologies These technologies are presented in detail and modeling studies including case studies can also be found in this book

Representation Theorems in Computer Science Özgür Lütfü Özçep,2019-07-16 Formal specifications are an important tool for the construction verification and analysis of systems since without it is hardly possible to explain whether a system worked correctly or showed an expected behavior This book proposes the use of representation theorems as a means to develop an understanding of all models of a specification in order to exclude possible unintended models demonstrating the general methodology with representation theorems for applications in qualitative spatial reasoning data stream processing and belief revision For qualitative spatial reasoning it develops a model of spatial relatedness that captures the scaling context with hierarchical partitions of a spatial domain and axiomatically characterizes the resulting relations It also shows that various important properties of stream processing such as prefix determinedness or various factorization properties can be axiomatized and that the axioms are fulfilled by natural classes of stream functions The third example is belief revision which is concerned with the revision of knowledge bases under new potentially incompatible information In this context the book considers a subclass of revision operators namely the class of reinterpretation operators and characterizes them axiomatically A characteristic property of reinterpretation operators is that of dissolving potential inconsistencies by reinterpreting symbols of the knowledge base Intended for researchers in theoretical computer science or one of the above application domains the book presents results that demonstrate the use of representation theorems for the design and evaluation of formal specifications and provide the basis for future application development kits that support application designers with automatically built representations
