User Experience Design in the Era of Automated Driving Andreas Riener, Myounghoon Jeon, Ignacio

Alvarez, 2022-01-01 This book is dedicated to user experience design for automated driving to address humane aspects of automated driving e.g. workload, safety, trust, ethics and acceptance. Automated driving has experienced a major development boost in recent years. However, most of the research and implementation has been technology driven rather than human centered. The levels of automated driving have been poorly defined and inconsistently used. A variety of application scenarios and restrictions has been ambiguous. Also, it deals with human factors, design practices and methods as well as applications such as multimodal infotainment, virtual reality, augmented reality and interactions in and outside users. This book aims at 1) providing engineers, designers and practitioners with a broad overview of the state of the art user experience research in automated driving to speed up the implementation of automated vehicles and 2) helping researchers and students benefit from various perspectives and approaches to generate new research ideas and conduct more integrated research.

Human-Automation Interaction Design Jediah R. Clark, Neville A. Stanton, Kirsten Revell, 2021-10-13 This text presents a four step approach for applying communicative concepts to driving automation including scoping, piloting, designing and testing. It further provides experimental data on how practical human-human communication strategies can be applied to interaction in automated vehicles. The book explores the role of communication and the nature of situation awareness in automated vehicles to ensure safe and usable automated vehicle operation. It covers the issue of interaction in automated vehicles by providing insight into communicative concepts, the transfer of control in human teams and how these concepts can be applied in automated vehicles. The theoretical framework is built on by presenting experimental findings, design workshop output and providing a demonstration of prototype generation for automated assistants that addresses a wide range of performance outcomes within human-machine interaction. Aimed at professionals, graduate students and academic researchers in the fields of ergonomics, automotive engineering, transportation engineering and human factors, this text discusses experimental findings on how practical human-human communication strategies can be applied to interaction in automated vehicles. Provides a four step approach for applying communicative concepts to driving automation including scoping, piloting, designing and testing. Explores the role of distributed situation awareness in automated vehicles. Covers

Aluminium Nnamdi Anyadike, 2002-03-15

Annotation: This comprehensive report examines the state of the world aluminium industry at the start of the 21st century reviewing the aftermath of 1994's Memorandum of Understanding (MoU) which mothballed 1.5m tonnes of capacity and led to a sharp rise in prices. It examines the damage done to aluminium demand from both the automotive and beverage can sectors and the effects of talk of recession in the US and Europe in 2001. However it finds that aluminium is at last beginning to see signs of success in the mass produced end of the automotive market with the launch of the Audi A2. Packaging demand is also holding up although PET is continuing to make gains in the beverage container market. Up to date in depth research and analysis to make you an authority on the world's major nickel markets. This new report is a vital aid to surviving and prospering in a complex and changing market. Western Europe remains a net importer of primary aluminium with imports of over 2 million tonnes. If the expected growth in per capita aluminium consumption up to 2010 takes place Europe will rely even more heavily on imported metal from countries such as Russia and the Gulf Co-operation Council countries. Chinese demand for aluminium in building and construction is forecast to grow at an impressive 15% per year. Aluminium will provide 68% of the material weight of the airframe of the new Airbus A3XX. Using current Airbus design principles about 980 tonnes of semi-finished aluminium products will be needed per aircraft. Aluminium applications in industrial vehicles grew by 4.5% in the five years to 2000 however they could increase worldwide by 30-50% by 2005. Aluminium bridges are a new and promising market with recent technological advances making it possible to construct bridges with spans of up to 100 metres or more. The three biggest European construction markets for aluminium are Italy with 270 000 tonnes, Germany with 210 000 tonnes and the UK with 150 000 tonnes.
