International Handbook of Mathematical Learning Difficulties Annemarie Fritz, Vitor Geraldi Haase, Pekka Räsänen, 2019-01-30 This comprehensive volume provides teachers researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades but the most part of this research has been conducted in non applied settings and there's still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings Now it's time to bring the results from the laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments It also

provides insights to translate research knowledge into public policies in order to address socioeconomic issues And it does so from an international perspective dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society

Thomas O'Shea, 2016-05-19 What is mathematics and what aspects of it should be taught in schools How and to whom should it be taught and how should its understanding be assessed These questions continue to drive curriculum development school organization teaching methods and research agendas No one today doubts that mathematics should be taught in our schools but this was not always so Mathematics Education Across Time and Place aims to help mathematics teachers teacher educators and anyone else interested in mathematics education appreciate the path this discipline has taken through the ages To understand the historical and social context for schools and the place of mathematics within them we meet a variety of mathematics educators from different times and places Though fictional their lives and social circumstances are based on historical documents and professional sources They range from ancient Greece to modern Zimbabwe from Persia to British Columbia from Islamic Baghdad to revolutionary Paris from Elizabethan England to twentieth century New York and from the rural one room schools of North America to the modern comprehensive secondary school By sharing the teachers lives we come to understand how they developed their love for teaching mathematics and how their work fit into the larger social context of their time *African Traditional Oral Literature and Visual cultures as Pedagogical Tools in Diverse Classroom*

Contexts Lewis Asimeng-Boahene, Michael Baffoe, 2018-06-01 This book the second in the series is a distinct exploration of how educational policy makers curriculum developers educators learners and social activists can utilize the hitherto untapped rich resource of African traditional oral literature and visual cultures These are epistemological reservoirs and invaluable pedagogical tools in the delivery of content in the classrooms of the present global village most of whom contain diverse student populations from varying backgrounds The content of the book is thus designed to help expand educators repertoire of understanding beyond the hitherto conventional wisdom most of which are either outdated or are colonial impositions on former colonial entities Our motivation for pulling together this anthology was due to the fact scholars educators and educational policy makers have hitherto paid little attention to the epistemological and pedagogical value of Traditional Indigenous Knowledge systems TIKS Our objective has been largely achieved by this anthology in the sense that the research perspectives of the contributors to this effort have enhanced the hitherto limited exposure and knowledge about traditional oral literature and visual cultures in Africa The torch that has been lighted from this endeavor heightens the epistemological and pedagogical implications of TIKS In launching this book we are extending a clarion call to researchers and disciples of Indigenous Knowledge systems in Africa and elsewhere to seize this opportunity and interest generated by this endeavor to undertake more studies in this area Our current efforts were focused mainly on Africa TIKS systems but we strongly believe that there are similar and equally powerful and important TIKS systems in other parts of the world Asia the Far East Central and Southern America as well as the Caribbean that are longing for exploration and exposition It is therefore our fervent hope that exploration and dissemination of knowledge in this field will continue with the flame lighted from this endeavor We believe that these efforts will greatly enhance awareness an otherwise neglected and almost forgotten but important aspects of knowledge creation and dissemination especially about traditional and hitherto unwritten histories and knowledge systems around the world These undertakings will help to broaden the conceptualization of what constitutes global knowledge within the current reality of globalization
