Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

In Fraud We Trust Wes Henricksen, 2024-11-15 Telling lies and falling for them is one of the things that makes us human The vast majority of these falsehoods are harmless and perfectly legal But when someone deceives another for material gain or profit inflicting injury in the process we give this kind of lie a special label fraud Most people are familiar with the concept and understand that fraud is prohibited by law What many fail to appreciate however is that the law does not treat all frauds equally If you defraud an individual you might end up in prison On the other hand if you defraud millions of people what Wes Henricksen calls fraud on the public you might end up wealthy or powerful or even get elected president In a perverse sense the bigger the fraud the more likely it is protected by the First Amendment and therefore legal As a

result many of the largest and most destructive fraud schemes are allowed encouraged and richly rewarded Examples of fraud on the public are everywhere The fossil fuel industry long used PR firms and lobbyists to spread disinformation about oil s role in climate change Sugar companies misled the public about the dangers of high fructose corn syrup redirecting the public s attention to fat Cigarette manufacturers famously lied about the risks of tobacco and opioid makers lied about the effects of the drug Social media influencers and fringe media outlets promoted false claims about the COVID 19 pandemic being a government hoax Others claimed that vaccines were part of a sinister plot Politicians on both sides of the aisle lie with such regularity that people have become deeply cynical about whether to believe anything they say Henricksen shows that large scale fraud is carried out for many reasons beyond financial profit including political gain the prevention of justice and the falsification of history In addition to exposing the depths of the problem Henricksen gives readers a way forward He proposes we call these massive deceit campaigns by their proper name that we de weaponize the First Amendment which was never meant to shield swindlers and that we enact new laws that protect the public from fraud By revealing for the first time the root legal cause of the misinformation crisis and presenting novel solutions In *Fraud We Trust* speaks to the present moment as it offers answers for the future

Experiments of the Mind

Emily Martin,2022-01-25 This book is an ethnographic investigation of the everyday professional lives of experimental cognitive psychologists aimed at conveying to readers a sense of the social world of the laboratory and explaining how the field produces knowledge about human cognition Emily Martin did fieldwork in three labs conducting research in normal human cognition In the early days of her fieldwork Martin was struck by how

irrelevant her own subjective experience was to the experimenters What researchers conducting the experiments were seeking was data about how her brain responded to stimuli such as photographs and videos Her own responses to the situation the set up of the experiment etc were very much beside the point This led Martin to wonder when in the history of this field introspection and related messy data concerning the social conditions of lab experimentation came to be expelled Her book examines this history provides a comparison with the history of her own field anthropology and discusses the evolution of a pillar of contemporary experimental cognitive psychology the psychological experiment In the course of this book Martin reports on her discussions with practicing experimental psychologists about the efficacy of placing persons in such unusual settings in the search for general knowledge What emerges is an account of the cognitive psychology experiment as an artificial construction in which a certain kind of knowledge is produced and a certain kind of human subject is created But this book is not a debunking of the discipline of experimental cognitive psychology Martin readily acknowledges the fact that real knowledge is produced in these highly structured and artificial experimental settings She does however question the tendency within this discipline to dismiss the significance of the social and cultural setting of the formal psychological experiment and argues that the field promotes a truncated view of the human subject and its capacities

with chapters on how motor control is achieved in the latest generation of artificial agents and how such technologies have been exploited to favor human robot interaction This book considers the complete human robot cycle from an examination of how humans perceive motion and act in the world to models for motion perception and control in artificial agents In this respect the book will provide insights into the perception and action loop in humans and machines joining together aspects that are often addressed in independent investigations As a consequence this book positions itself in a field at the intersection of such different disciplines as Robotics Neuroscience Cognitive Science Psychology Computer Vision and Machine Learning By bridging these different research domains the book offers a common reference point for researchers interested in human motion for different applications and from different standpoints spanning Neuroscience Human Motor Control Robotics Human Robot Interaction Computer Vision and Machine Learning Chapter The Importance of the Affective Component of Movement in Action Understanding of this book is available open access under a CC BY 4 0 license at link springer com

[The Genesis of Israel and Egypt](#) Emmet Sweeney, 2023-10-01 *The Genesis of Israel and Egypt* examines the earliest phase of historical consciousness in the ancient Near East looking in particular at the mysterious origins of Egypt's civilization and its links with Mesopotamia and the early Hebrews The book takes a radically alternative view of the rise of high civilization in the Near East and the forces which propelled it The author Emmet Sweeney finds that the early civilizations developed amidst a background of massive and repeated natural catastrophes events which had a profound effect upon the ancient peoples and left its mark upon their myths legends customs and religions Ideas found in all corners of the globe concepts such as dragon worship pyramid building and human sacrifice are shown by Sweeney to have a common origin in the cataclysmic events of the period termed the eruptive age by legendary English explorer Percy Fawcett Terrified and traumatized by the forces of nature people all over the world began to keep an obsessive watch on the heavens and to offer blood sacrifices to the angry sky gods These events which are fundamental to any understanding of the first literate cultures have nonetheless been completely effaced from the history books and an official history of mankind which is little more than an elaborate fiction now graces the bookshelves of the world's great libraries Starting with clues unearthed by history sleuth Immanuel Velikovsky

and others Emmet Sweeney takes the investigation further While the Near Eastern civilizations are generally considered to have taken shape around 3300 BC about 2 000 years before those of China and the New World Ages in Alignment demonstrates that they had no 2 000 year head start All the ancient civilizations arose simultaneously around 1300 BC in the wake of a terrible natural catastrophe recalled in legend as the Flood or Deluge Sweeney points out that the presently accepted chronology of Egypt is not based on science but on venerated literary tradition This chronology had already been established in its present form by the third century BC when Jewish historians utilizing the History of Egypt by the Hellenistic author Manetho sought to tie in Egypt s history with that of the Bible Apparent gaps and weird repetitions resulted Improbable feats like the construction of major cut stone engineering projects before the advent of steel tools or Pythagorean geometry point to the weaknesses of the traditional view Taking a more rigorous approach and pointing to solid evidence Emmet Sweeney shows where names overlap and where one and the same group is mistaken for different peoples in different times Volume 1 The Genesis of Israel and Egypt looks at the archaeological evidence for the Flood evidence now misinterpreted and ignored This volume examines the rise of the first literate cultures in the wake of the catastrophe and goes on to trace the story of the great migration which led groups of early Mesopotamians westward toward Egypt where they helped to establish Egyptian civilization This migration recalled in the biblical story of Abraham provides the first link between Egyptian and Hebrew histories The next link comes a few generations later with Imhotep the great seer who solved the crisis of a seven year famine by interpreting pharaoh Djoser s dream Imhotep is shown to be the same person as Joseph son of Jacob

Fleming's stimulating exploration of fields as diverse as culture, history, science, art, logic, ethics, myth, economics, and anthropology being made up of four hundred and four engaging essay entries covering topics such as Boredom, Community, Debt, Growth, Harmless Lunatics, Land, Lean Thinking, Nanotechnology, Play, Religion, Spirit, Trust, and Utopia. The threads running through every entry are Fleming's deft and original analysis of how our present market-based economy is destroying the very foundations, ecological, economic, and cultural, on which it depends and his core focus: a compelling, grounded vision for a cohesive society that might weather the consequences. A society that provides a satisfying, culturally rich context for lives well lived in an economy not reliant on the impossible promise of eternal economic growth. A society worth living in. Worth fighting for. Worth contributing to. The beauty of the dictionary format is that it allows Fleming to draw connections without detracting from his in-depth exploration of each topic. Each entry carries intriguing links to other entries, inviting the enchanted reader to break free of the imposed order of a conventional book, starting where she will and following the links in the order of her choosing. In combination with Fleming's refreshing writing style and good-natured humor, it also creates a book perfectly suited to dipping in and out. The decades Fleming spent honing his life's work are evident in the lightness and mastery with which *Lean Logic* draws on an incredible wealth of cultural and historical learning, from Whitman to Whitefield, Dickens to Daly, Kropotkin to Kafka, Keats to Kuhn, Oakeshott to Ostrom, Jung to Jensen, Machiavelli to Mumford, Mauss to Mandelbrot, Leopold to Lakatos, Polanyi to Putnam, Nietzsche to Nass, Keynes to Kumar, Scruton to Shiva, Thoreau to Toynbee, Rabelais to Rogers, Shakespeare to Schumacher, Locke to Lovelock, Homer to Homer, Dixon in demonstrating that many of the principles it commends have a track record of success long pre-dating our current society. Fleming acknowledges with honesty the challenges ahead but rather than inducing despair, *Lean Logic* is rare in its ability to inspire optimism in the creativity and intelligence of humans to nurse our ecology back to health, to rediscover the importance of place and play, of reciprocity and resilience, and of community and culture. Recognizing that *Lean Logic*'s sheer size and unusual structure could be daunting, Fleming's long-time collaborator, Shaun Chamberlin, has also selected and edited one of the potential pathways through the dictionary to create a second stand-alone volume, *Surviving the Future: Culture, Carnival, and Capital in the Aftermath of the Market Economy*. The content, rare insights, and uniquely enjoyable writing style remain Fleming's but presented at a more accessible paperback length and in conventional read-it-front-to-back format.

Science Fraud: Darwin's Plagiarism of Patrick Matthew's Theory Mike Sutton, 2023. Patrick Matthew in 1831 originated the complete theory of evolution by natural selection in his book *On Naval Timber and Arboriculture* and did so before Charles Darwin and Alfred Wallace claimed to independently replicate it in 1858. Unjustly and against the Arago convention on priority, a ruling that gives origination of any science theory to the first to publish, Matthew has been illicitly denied his priority on the grounds he never influenced anyone with his breakthrough. Today, Big Data research has uncovered Darwin's science fraud by plagiarism, revealing evidence which proves beyond all reasonable doubt that he and Alfred Wallace both independently plagiarised the

theory of evolution by natural selection from Patrick Matthew Books have been newly unearthed in the publication record to show that at least 30 people cited Matthew's work in published literature before 1858 and that several were known influencers of Darwin's and Wallace's work in the field. Additionally, several people in Darwin's and Wallace's social circles were first to be second into print using original terms coined by Matthew in his bombshell breakthrough book. This book reveals all the newly unearthed data and essentially explains it alongside the deplorable treatment of Patrick Matthew in scholarly historical context. Dr. Mike Sutton further reveals using social science participatory observation methods and experimental results how members of the so-called Darwin Industry, enabled and facilitated by the deliberate publication of falsehoods and other grossly misleading editing on Wikipedia, have disgracefully worked to re-bury these newly unearthed facts by means of knee-jerk blind sight ignorant rejection, blatant and deliberate fact denial, censorship, persistent and serious workplace harassment, obscene social media abuse, poison pen emails, lies, mischievous misrepresentation, and repeat research plagiarism.
