Rock Mechanics: Achievements and Ambitions Meifeng Cai, 2011-09-22 *Rock Mechanics Achievements and Ambitions* contains the papers accepted for the 2nd ISRM International Young Scholars Symposium on Rock Mechanics which was sponsored by the ISRM and held on 14-16 October 2011 in Beijing China immediately preceding the 12th ISRM Congress on Rock Mechanics. Highlighting the work of young teachers, researchers and practitioners, the present work provides an important stimulus for the next generation of rock engineers because in the future there will be more emphasis on the use of the Earth's resources and their sustainability and more accountability of engineers' decisions. In this context, it is entirely appropriate that the Symposium venue for the young scholars was in China because of the rock mechanics related work that is anticipated in the future. For example, in the Chinese Academy of Sciences report *Energy Science and Technology in China: A Roadmap to 2050*, it is predicted that China's total energy demand will reach 31.45, 61 and 66 x 10<sup>8</sup> tce (tonnes of coal equivalent) in 2010, 2020, 2035 and 2050. The associated per capita energy consumption for the same years is estimated at 2.3, 3.1, 4.1 and 4.6 tce. This increasing demand will be met inter alia by the continued operation and development of new coal mines, hydroelectric plants and nuclear power stations with one or more underground nuclear waste repositories, all of which will be improved by more modern methods of rock engineering design developed by young scholars. In particular, enhanced methods of site investigation, rock characterisation, rock failure understanding, computer modelling and rock excavation and support are needed. The topics in the book include contributions on: Field investigation and observation; Rock constitutive relations and property testing; Numerical and physical modeling for rock engineering; Information technology, artificial intelligence and other advanced techniques; Underground and surface excavation and reinforcement techniques; Dynamic rock mechanics and blasting; Prediction and prevention of geo-environmental hazard; Case studies of typical rock engineering. Many of the 200 papers address these topics and demonstrate the skills of the young scholars, indicating that we can be confident in the continuing development of rock mechanics and rock engineering, leading to more efficient, safer and economical structures built on and in rock masses. *Rock Mechanics Achievements and Ambitions* will appeal to professionals, engineers and academics in rock mechanics, rock engineering, tunnelling, mining, earthquake engineering, rock dynamics and geotechnical engineering. *Structural Interfaces and Attachments in Biology* Stavros Thomopoulos, Victor Birman, Guy M.

Genin, 2012-10-05 Attachment of dissimilar materials in engineering and surgical practice is a perennial challenge. Bimaterial attachment sites are common locations for injury, repeated injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. *Structural Interfaces and Attachments in Biology* describes the attachment of dissimilar materials from multiple perspectives. The text will simultaneously elucidate natural bimaterial attachments and outline engineering principles underlying successful attachments to the communities of tissue engineers and surgeons. Included is an in-depth analysis of the biology of attachments.

in the body and mechanisms by which robust attachments are formed a review of current concepts of attaching dissimilar materials in surgical practice and a discussion of bioengineering approaches that are currently being developed

*Materials Processing Fundamentals 2021* Jonghyun Lee, Samuel Wagstaff, Alexandra Anderson, Fiseha Tesfaye, Guillaume Lambotte, Antoine Allanore, 2021-02-17 This volume covers various aspects of the fundamentals synthesis analysis design monitoring and control of metals materials and metallurgical processes and phenomena Topics represented include but are not limited to Experimental analytical physical and computer modeling of physical chemistry and thermodynamics Modeling of the transport phenomena in materials processing and metallurgical processes involving iron steel nonferrous metals and composites Second phase particles in metals and processes and the fundamentals experimental studies or theoretical studies on the nucleation growth motion and removal of these particles from the molten metal or reactors Physical chemistry thermodynamics and kinetics for the production and refining of rare earth metals Control of industrial processes in the field of extraction and processing of metals and materials

*Applied Quantitative Analysis in Education and the Social Sciences* Yaacov M. Petscher, Christopher Schatschneider, Donald L. Compton, 2013 To say that complex data analyses are ubiquitous in the education and social sciences might be an understatement Funding agencies and peer review journals alike require that researchers use the most appropriate models and methods for explaining phenomena Univariate and multivariate data structures often require the application of more rigorous methods than basic correlational or analysis of variance models Additionally though a vast set of resources may exist on how to run analysis difficulties may be encountered when explicit direction is not provided as to how one should run a model and interpret results The mission of this book is to expose the reader to advanced quantitative methods as it pertains to individual level analysis multilevel analysis item level analysis and covariance structure analysis Each chapter is self contained and follows a common format so that readers can run the analysis and correctly interpret the output for reporting

**Sedimentary Basins and Crustal Processes at Continental Margins** G.M. Gibson, F. Roure, G. Manatschal, 2015-10-19 Continental margins and their fossilized analogues are important repositories of natural resources With better processing techniques and increased availability of high resolution seismic and potential field data imaging of present day continental margins and their embedded sedimentary basins has reached unprecedented levels of refinement and definition as illustrated by examples described in this volume This in turn has led to greatly improved geological geodynamic and numerical models for the crustal and mantle processes involved in continental margin formation from the initial stages of rifting through continental rupture and break up to development of a new ocean basin Further informing these models and contributing to a better understanding of the features imaged in the seismic and potential field data are observations made on fossilized fragments of exhumed subcontinental mantle lithosphere and ocean continent transition zones preserved in ophiolites and orogenic belts of both Palaeozoic and Mesozoic age from several different continents including Europe South Asia and Australasia
