The Sons of Pigs and Apes Neil J. Kressel, 2012 The frightening resurgence of antisemitism in the Muslim world

Hear Me Roar Erna Walraven, 2025-04-29 In the early 1980s when Erna Walraven decided to follow her dreams and become one of the first female zookeepers in Australia she thought her biggest challenges would be feeding big cats and subduing irate gorillas In fact it was her male colleagues who made work miserable harassing and humiliating her for doing a man's job So she looked to the animals under her care to prove them wrong Despite what Erna's colleagues seemed to think the females of the animal world were far from weak and demure Elephant matriarchs led their herds female bonobos revelled in sexual exploration emu mothers abandoned their chicks to the care of their fathers Her colleagues wouldn't dare tell a female tiger that hunting was a male's job why were they so intent on limiting Erna In this insightful and delightful book Erna blends memoir and pop science to tell a fiercely female story She recounts a life spent caring for animals in a fast transforming industry and dives into scientific evidence and evolutionary history to debunk the myths that once held her back

Governing for Revolution Megan Stewart, 2021-03-18 For some rebel groups governance is not always part of a military strategy but a necessary element of realizing revolution through civil war

In Fraud We Trust Wes Henricksen, 2024-11-15 Telling lies and falling for them is one of the things that makes us human The vast majority of these falsehoods are harmless and perfectly legal But when someone deceives another for material gain or profit inflicting injury in the process we give this kind of lie a special label

fraud Most people are familiar with the concept and understand that fraud is prohibited by law What many fail to appreciate however is that the law does not treat all frauds equally If you defraud an individual you might end up in prison On the other hand if you defraud millions of people what Wes Henricksen calls fraud on the public you might end up wealthy or powerful or even get elected president In a perverse sense the bigger the fraud the more likely it is protected by the First Amendment and therefore legal As a result many of the largest and most destructive fraud schemes are allowed encouraged and richly rewarded Examples of fraud on the public are everywhere The fossil fuel industry long used PR firms and lobbyists to spread disinformation about oil s role in climate change Sugar companies misled the public about the dangers of high fructose corn syrup redirecting the public s attention to fat Cigarette manufacturers famously lied about the risks of tobacco and opioid makers lied about the effects of the drug Social media influencers and fringe media outlets promoted false claims about the COVID 19 pandemic being a government hoax Others claimed that vaccines were part of a sinister plot Politicians on both sides of the aisle lie with such regularity that people have become deeply cynical about whether to believe anything they say Henricksen shows that large scale fraud is carried out for many reasons beyond financial profit including political gain the prevention of justice and the falsification of history In addition to exposing the depths of the problem Henricksen gives readers a way forward He proposes we call these massive deceit campaigns by their proper name that we de weaponize the First Amendment which was never meant to shield swindlers and that we enact new laws that protect the public from fraud By revealing for the first time the root legal cause of the misinformation crisis and presenting novel solutions In *Fraud We Trust* speaks to the present moment as it offers answers for the future

Psychology and Mathematics Education Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do

not usually optimize but rather satisfy even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity
