Sudhansu Chokroverty

2012 Aasm Scoring Manual:

Sleep: Evolution and Functions Vibha M. Jha, Sushil K. Jha, 2020-10-31 This book discusses the evolution of sleep and its possible function in the higher invertebrates and vertebrates including humans. It describes the current concept of sleep and its functions based on research on the mammalian system. To date, electrophysiological recordings of the brain waves, muscle activity, and eye movements are the only tools available for characterizing the sleep architecture in the majority of animals. In mammals and birds, only two distinct types of sleep are found: non-rapid eye movement (NREM) and rapid eye movement (REM) sleep. Since the discovery of REM sleep, studies have been performed to understand the purpose of the two distinct sleep states in higher vertebrates, birds, and mammals, and how REM sleep was evolved. The book summarizes the role of both REM and NREM sleep in the proper functioning of the brain and body. It covers various aspects of the role of sleep in important physiological processes, including memory consolidation, induction of synaptic plasticity, energy restoration, enhancing immune response, and maturation of neuronal circuitries during early life. Lastly, the book reviews the effects of chronic acute sleep deprivation on memory consolidation, obesity, and the immune system in animal models and humans.

Sleep Disorders in Psychiatric Patients Hugh Selsick, 2018-06-07 This book is designed to give clinicians a practical guide to the detection, assessment, and treatment of sleep disorders in patients with psychiatric illness in order to better treat both their sleep disorder and their psychiatric disorder. In addition to providing a thorough introduction to the major sleep disorders, it offers clear guidance on how to assess and manage these disorders in patients with a wide range of psychiatric conditions. The role of psychiatric medication and special considerations to be borne in mind when treating psychiatric patients are also addressed. Although it is aimed primarily at psychiatrists, this will also be a useful handbook for sleep clinics and general practitioners who frequently have to manage patients with both psychiatric and sleep disorders. **Ernsting's**

Aviation and Space Medicine David P. Gradwell, Elizabeth S. Wilkinson, 2025-05-30 Ernsting's Aviation and Space Medicine applies current understanding in medicine, physiology, and the behavioural sciences to the medical challenges and stresses that are faced by both civil and military aircrew and their passengers on a daily basis. The sixth edition of this established textbook and clinical reference has been revised and updated by a multidisciplinary team of experienced contributors, many new to this edition. The structure of the book has been refined, bringing related chapters together where appropriate, while the clinical content has been carefully streamlined in line with the specific requirements of the aviation medicine practitioner and adviser, with new chapters added on Commercial Space Travel, Skin Disease, and Women's Health. Key Features: Convenient: embraces all aspects of aviation medicine in a single volume, divided into four parts for ease of reference. Aviation Physiology, Aircrew Systems, Space Physiology, Medicine, Clinical Aviation Medicine, and Operational Aviation Medicine. Comprehensive: covers all forms of military and passenger-carrying aircraft, including issues surrounding passenger safety and transport of the sick and injured. Aids detailed understanding: focuses on the principles underlying the standards in the

field rather than just the standards themselves Applicable worldwide addresses international issues including worldwide regulation of medical standards and travel and disease Accessible chapter summaries enable rapid assimilation of key points while key references and suggestions for further reading encourage in depth learning eBook included text fully online and searchable via VitalSource eBook The text remains the recommended coursebook for those studying for the Diploma in Aviation Medicine of the Faculty of Occupational Medicine of the Royal College of Physicians recognized worldwide as an exemplary standard in the field and for similar worldwide qualifications It is an essential companion for all civil and military aviation medicine practitioners both when preparing for professional examinations and in daily practice and for those in the many disciplines of the behavioural and life sciences that include some study of aviation its physiology and related issues It is also recommended reading for those with a wider interest in the medical problems of professional or recreational flying air transport and the aviation industry
