Features of the Hilbert Book Model Hans van Leunen, 2012-05-23 This book starts from the axioms of traditional quantum logic and extends this model such that it incorporates physical fields as well as dynamics It uses the isomorphism between the set of propositions of traditional quantum logic and the set of closed subspaces of an infinite dimensional separable Hilbert space that uses quaternions in order to specify its inner products In order to implement dynamics the developed model applies a sequence of extended quantum logics or equivalently a sequence of extended separable Hilbert spaces Each of the members of the sequence represents a static status quo of the universe This leads to a new model of physics The Hilbert Book Model The book explains the existence of all known elementary particles of the standard model and shows how these particles get their mass and inertia Due to its usage of quaternionic quantum state functions the model offers a completely new view into the undercrofts of fundamental physics Transactions of the Mining and Geological Institute of India, 1910

Tamm, 2012-12-06 I E Tamm is one of the great figures of 20th century physics and the mentor of the late A D Sakharov Together with I M Frank he received the Nobel Prize in 1958 for the explanation of the Cherenkov effect This book contains a commented selection of his most important contributions to the physical literature and essays on his contemporaries Mandelstam Einstein Landau and Bohr as well as his contributions to Pugwash conferences About a third of the selections originally appeared in Russian and are to our knowledge for the first time now available to Western readers This volume includes a preface by Sir Rudolf Peierls a biography compiled by Tamm's former students V Ya Frenkel and B M Bolotovskii and a complete bibliography Advances in Fracture Research Alberto Carpinteri, Yiu-Wing Mai, Robert O. Transactions Mining, Geological, and Metallurgical Institute of India, **Foundations Of Quantum Mechanics In The Light Of New Technology: Selected Papers From The Proceedings Of The First Through Fourth International Symposia On Foundations Of Quantum Mechanics** Yoshimasa Murayama, Sadao Nakajima, Akira Tonomura, 1997-01-03 I re experience once again the stimulating atmosphere of each of the ISQMs There were theoretical discussions in diverse frontier areas of physics as well as descriptions of beautiful new or planned experiments and technologies From each of the Symposia I always came away with the exciting feeling of how wonderful physics is and how lucky it is to be a physicist in this era Chen Ning Yang This volume is selected from the First through Fourth International Symposia on Foundations of Quantum Mechanics The International Symposia on Foundations of Quantum Mechanics in the Light of New Technology ISQMs provide a unique interdisciplinary forum where distinguished theorists and experimentalists of diverse fields of research gather to discuss basic problems in quantum mechanics in the light of new technology This volume collects 51 papers selected from over 200 papers by many distinguished scientists It includes articles by C N Yang J A Wheeler Y Nambu L Esaki and M P A Fisher to name just a few and contains topics ranging from quantum measurements to quantum cosmology

Collected Works (volume 1): Published Papers Stephen Luttrell, 2023-10-24 The motivation for the research that is described in these volumes is the wish to explain things in terms of their underlying causes rather than merely being satisfied with phenomenological descriptions When this reductionist approach is applied to information processing it allows the internal structure of information to be analysed so information processing algorithms can then be derived from first principles One of the simplest examples of this approach is the diagonalisation of a data covariance matrix there are many variants of this basic approach such as singular value decomposition in which the assumed independent components of high dimensional data are identified and extracted The main limitation of this type of information analysis approach is that it is based on linear algebra applied globally to the data space so it is unable to preserve information about any local data structure in the data space For instance if the data lives on a low dimensional curved manifold embedded in the data space then only the global properties of this manifold would be preserved by global linear algebra methods In practice data whose high dimensional structure is non trivial typically lives on a noisy version of a curved manifold so techniques for analysing such data must automatically handle this type of structure For instance a blurred image of a point source is described by its underlying degrees of freedom i.e the position of the source and as the source moves about it generates a curved manifold that lives in the high dimensional space of pixel values of the sampled image The basic problem is then to deduce the internal

properties of this manifold by analysing examples of such images A more challenging problem would be to extend this analysis to images that contain several overlapping blurred images of point sources and so on There is no limit to the complexity of the types of high dimensional data that one might want to analyse These methods then need to be automated so that they do not rely on human intervention which would then allow them to be inserted as components into information processing networks The purpose of the research that is described in these volumes is to develop principled information processing methods that can be used for such analysis Self organising information processing networks arise naturally in this context in which ways of cutting up the original manifold into simpler pieces emerge automatically
