Almond Manual Processing Safety:

Manual on Postharvest Handling of Mediterranean Tree Fruits and Nuts Carlos H. Crisosto, Gayle M.

Crisosto, 2020-10-13 Postharvest is an important element of getting fresh high quality fruit to the consumer and technological advances continue to outpace infrastructure. This book provides valuable up to date information on postharvest handling of seven fruit and nut crops: almond, fig, peach, persimmon, pistachio, pomegranate, and table grape. These crops are of particular importance in the Mediterranean region but also to those countries that export and import these crops where intensive economic resources are dedicated to developing information to understand and solve their postharvest problems. Written by a team of internationally recognized postharvest experts, this manual collates and verifies essential but often difficult to access information on these important crops that is pertinent to the world's agricultural economy and affects agricultural communities.

Encyclopaedia of Occupational Health and Safety Jeanne Mager Stellman, 1998

The Microbiological Safety of Low Water Activity Foods and Spices Joshua B. Gurtler, Michael P. Doyle, Jeffrey L. Kornacki, 2014-12-08. Low water activity (*aw*) and dried foods such as dried dairy and meat products, grain based and dried ready to eat cereal products, powdered infant formula, peanut and nut pastes as well as flours and meals have increasingly been associated with product recalls and foodborne outbreaks due to contamination by pathogens such as *Salmonella* spp and enterohemorrhagic *E. coli*. In particular, recent foodborne outbreaks and product recalls related to *Salmonella* contaminated spices have raised the level of public health concern for spices as agents of foodborne illnesses. Presently, most spices are grown outside the U.S. mainly in 8 countries: India, Indonesia, China, Brazil, Peru, Madagascar, Mexico, and Vietnam. Many of these countries are under developed and spices are harvested and stored with little heed to sanitation. The FDA has regulatory oversight of spices in the United States; however, the agency's control is largely limited to enforcing regulatory compliance through sampling and testing only after imported foodstuffs have crossed the U.S. border. Unfortunately, statistical sampling plans are inefficient tools for ensuring total food safety. As a result, the development and use of decontamination treatments is key. This book provides an understanding of the microbial challenges to the safety of low *aw* foods and a historic backdrop to the paradigm shift now highlighting low *aw* foods as vehicles for foodborne pathogens. Up to date facts and figures of foodborne illness outbreaks and product recalls are included. Special attention is given to the uncanny ability of *Salmonella* to persist under dry conditions in food processing plants and foods. A section is dedicated specifically to processing plant investigations providing practical approaches to determining sources of persistent bacterial strains in the industrial food processing environment.

Readers are guided through dry cleaning wet cleaning and alternatives to processing plant hygiene and sanitation Separate chapters are devoted to low aw food commodities of interest including spices dried dairy based products low aw meat products dried ready to eat cereal products powdered infant formula nuts and nut pastes flours and meals chocolate and confectionary dried teas and herbs and pet foods The book provides regulatory testing guidelines and recommendations as well as guidance through methodological and sampling challenges to testing spices and low aw foods for the presence of foodborne pathogens Chapters also address decontamination processes for low aw foods including heat steam irradiation microwave and alternative energy based treatments
