Analysis of Computer and Communication Networks Fayez Gebali, 2008-06-24 The purpose of this book is to give the reader two things to paraphrase Mark Twain Roots to know the basics of modeling networks and Wings to fly away and attempt modeling other proposed systems of interest The Internet phenomenon is affecting us all in the way we communicate conduct business and access information and entertainment More unforeseen applications are still to come All of this is due to the existence of an efficient global hi performance network that connects millions of users and moves information at a high rate with small delay High Performance Networks A high performance network is characterized by two performance measures bandwidth and delay Traditional network design focused mainly on bandwidth planning the solution to network problems was to add more bandwidth Nowadays we have to consider message delay particularly for delay sensitive applications such as voice and real time video Both bandwidth and delay contribute to the performance of the network Bandwidth can be easily increased by compressing the data by using links with higher speed or by transmitting several bits in parallel using sophisticated modulation techniques Delay however is not so easily improved It can only be reduced by the use of good scheduling protocols very fast hardware and switching equipment throughout the network The increasing use of optical fibers means that the transmission channel is close to ideal with extremely high bandwidth and low delay speed of light The areas that need optimization are the interfaces and devices that connect the different links together such as hubs switches routers and bridges
