Thirty Years of Literacies Testing at the University of Cape Town Alan Cliff, 2024-05-10 This book delves into extensive research regarding the identification and characterization of academic literacies constructs encompassing academic literacy quantitative literacy mathematics comprehension and reasoning skills with a specific focus on their relevance within South

African educational contexts The volume provides an in depth exploration of the research behind the design and creation of assessments aimed at gauging these crucial literacies It also delves into theoretical aspects of developmental work while shedding light on historical and contemporary inequalities in the South African educational landscape Emphasising the practical implications of this research the book underscores the pivotal role that assessing academic literacies can play in the equitable selection of students particularly those hailing from educationally disadvantaged backgrounds Additionally it highlights how such assessments can inform higher education responsiveness curriculum development programme implementation and the provision of support services for students ultimately aiding in informed student placement decisions

Mosfet Modeling For Circuit Analysis And Design Carlos Galup-montoro,Marcio Cherem Schneider,2007-02-27 This is the first book dedicated to the next generation of MOSFET models Addressed to circuit designers with an in depth treatment that appeals to device specialists the book presents a fresh view of compact modeling having completely abandoned the regional modeling approach Both an overview of the basic physics theory required to build compact MOSFET models and a unified treatment of inversion charge and surface potential models are provided The needs of digital analog and RF designers as regards the availability of simple equations for circuit designs are taken into account Compact expressions for hand analysis or for automatic synthesis valid in all operating regions are presented throughout the book All the main expressions for computer simulation used in the new generation compact models are derived Since designers in advanced technologies are increasingly concerned with fluctuations the modeling of fluctuations is strongly emphasized A unified approach for both space matching and time noise fluctuations is introduced

both the engineer investigating the of a device in a system and the engineer looking for new ways to explore behaviour the possibilities offered by emerging devices Many authors have contributed to this book There are two main reasons for this in photonic device research modelling First the book addresses two broad fields and measurements for which a vast knowledge exists in many research groups that was not integrated in a book before Second a significant number of laboratories decided to closely co operate in order to gain additional information on merits and drawbacks of their own methods for simulation and experimentation of devices as compared to the methods used by their colleagues in other laboratories The outcome are new aspects and approaches that would not have been investigated in the absence of a framework for a co operative programme

Isogeometric analysis and hierarchical refinement for multi-field contact problems Dittmann, Maik, 2017-03-20 The present work deals with multi field contact problems in the context of IGA In particular a thermomechanical as well as a fracture mechanical system is considered where novel formulations are introduced for both The corresponding discrete contact formulations are based on a variationally consistent mortar approach adapted for NURBS discretized and hierarchical refined surfaces Finally the capabilities of the proposed framework are demonstrated within numerous numerical examples

Nuclear Science Abstracts ,1976-02 *Nonlocal Modeling, Analysis, and Computation* Qiang Du, 2019-03-20 Studies of complexity singularity and anomaly using nonlocal continuum models are steadily gaining popularity This monograph provides an introduction to basic analytical computational and modeling issues and to some of the latest developments in these areas Nonlocal Modeling Analysis and Computation includes motivational examples of nonlocal models basic building blocks of nonlocal vector calculus elements of theory for well posedness and nonlocal spaces connections to and coupling with local models convergence and compatibility of numerical approximations and various applications such as nonlocal dynamics of anomalous diffusion and nonlocal peridynamic models of elasticity and fracture mechanics A particular focus is on nonlocal systems with a finite range of interaction to illustrate their connection to local partial differential equations and fractional PDEs These models are designed to represent nonlocal interactions explicitly and to remain valid for complex systems involving possible singular solutions and they have the potential to be alternatives for as well as bridges to existing models The author discusses ongoing studies of nonlocal models to encourage the discovery of new mathematical theory for nonlocal continuum models and offer new perspectives on traditional models analytical techniques and algorithms

Metal Forming Analysis R. H. Wagoner, J.-L. Chenot, 2001-05-07 The introduction of numerical methods particularly finite element FE analysis represents a significant advance in metal forming operations Numerical methods are used increasingly to optimize product design and deal with problems in metal forging rolling and extrusion processes Metal Forming Analysis first published in 2001 describes the most important numerical techniques for simulating metal forming operations The first part of the book describes principles and procedures and includes numerous examples and worked problems The remaining chapters focus on applications of numerical analysis to specific forming

operations Most of these results are drawn from the authors research in the areas of metal testing sheet metal forming forging extrusion and similar operations Sufficient information is presented so that readers can understand the nonlinear finite element method as applied to forming problems without a prior background in structural finite element analysis Graduate students researchers and practising engineers will welcome this thorough reference to state of the art numerical methods used in metal forming analysis

The Review was organized by the Center for NDE at Iowa State University in cooperation with the Ames Laboratory of the USDOE, the American Society of Nondestructive Testing, the National Aeronautics and Space Administration (NASA), the National Institute of Standards and Technology, the Federal Aviation Administration, and the National Science Foundation. Industry, University, and Cooperative Research Centers. This year's Review of Progress in QNDE was attended by approximately 410 participants from the US and many foreign countries who presented a total of approximately 370 papers. As usual, the meeting was divided into 36 sessions with four sessions running concurrently. The Review covered all phases of NDE research and development from fundamental investigations to engineering applications and inspection systems and methods of inspection science from acoustics to x-rays. The Review continues to benefit from increased participation from foreign laboratories. This year the Review also welcomed members from the newly formed World Federation of NDE Centers and appreciate their participating in the program.
