Synthesized content between the book and comprehensive companion website offers expanded discussion of chapter topics, additional examples and technological tips. Each chapter features tried and tested pedagogical techniques, problem-solving challenges, discussion points, activities, mathematical challenges and student life-based applications that will encourage students to think and do. New to the 4th edition: A fully revised and updated chapter on technological advancements in the teaching of mathematics; Connections to both the updated NCTM Focal Points as well as the new Common Core State Standards are well integrated throughout the text; Problem-solving challenges and sticky questions featured in each chapter to encourage students to think through everyday issues and possible solutions; A fresh interior design to better highlight pedagogical elements and key features; A companion website with chapter-by-chapter video lessons, teacher tools, problem-solving Q&As, helpful links and resources, and embedded graphing calculators. *Cities and Their Vital Systems* Advisory Committee on Technology and Society, 1989 *Cities and Their Vital Systems* asks basic questions about the longevity, utility and nature of urban infrastructures, analyzes how they grow, interact and change, and asks how, when and at what cost they should be replaced. Among the topics discussed are problems arising from increasing air travel and airport congestion, the adequacy of water supplies and waste treatment, the impact of new technologies on construction, urban real estate values and the field of telematics, the combination of computers and telecommunications that makes money machines and national newspapers possible.
