- Where are epithelial tissues found? It covers the external surface of the body; it covers the internal and external organs. It forms secretory components of glands and lines the body cavities.

- Describe these three basic shapes of *epithelial cells*:

squamous The cell is very flat with a flattened centrally located nucleus.

cuboidal - the cell is cube shaped with a round centrally located nucleus

columnar- the cell is rectangle shape with an oval centrally located nucleus

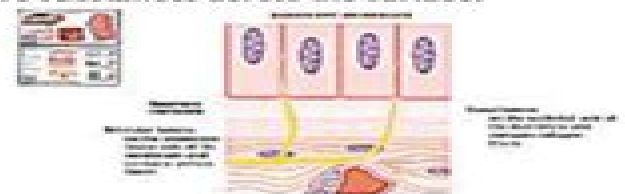

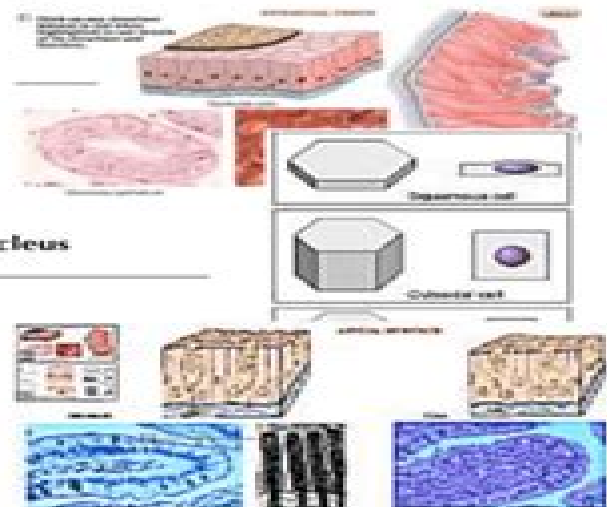

- What is the *apical surface* of epithelial tissue? What is the function of *microvilli* and *cilia* located on this surface?

Apical surface is exposed to the outside environment, the body cavity or the inner surface of hollow organs. Microvilli are finger like extensions of the cytoplasm and increase surface absorption. Cilia are hair like extensions of the apical surface. Designed to move substances across the surface.

- Describe the positional relationship between the *epithelial surface cells*, *basal surface*, *basement membrane*, and *connective tissue*. *epithelial surface cell* is the free surface or surface exposed; the *basal surface* is the bottom of the cell with underlying tissues below and *basement membrane* is the membrane between epithelial and underlying connective tissue

- Describe each of the following *epithelial tissue* arrangements:

Petersen, 2023-07-03 While Active Learning Classrooms or ALCs offer rich new environments for learning they present many new challenges to faculty because among other things they eliminate the room's central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed The importance of learning how to use these classrooms well and to capitalize on their special features is paramount The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the
