HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure of the human body and its internal organs

Physiology

The study of the function of the human body and its internal organs

Structural levels

Studying the human body at the cellular, tissue, organ, and system levels

- 1. **Cellular level** - study of the structure and function of cells
- 2. **Tissue level** - study of the structure and function of tissues
- 3. **Organ level** - study of the structure and function of organs
- 4. **System level** - study of the structure and function of systems
- 5. **Whole body level** - study of the structure and function of the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body

Characteristics of cells

All cells are eukaryotic and have a nucleus

Cells are specialized for their function

Cells are surrounded by a cell membrane

Cells are connected to each other

Cells are constantly changing

The **epithelium** is the outermost layer of cells that covers the body

It is composed of cells that are closely packed together

Epithelial cells are specialized for their function

Epithelial cells are constantly changing

Epithelial cells are connected to each other

ORGANS

Organs are made up of different types of tissues

Each organ has a specific function

Organs are specialized for their function

Organs are constantly changing

Organs are connected to each other

Systemic level

Study of the function of the whole body

Systemic level is the study of the function of the whole body

Systemic level is the study of the function of the whole body

Systemic level is the study of the function of the whole body

Systemic level is the study of the function of the whole body

Organic level

Study of the function of the whole body

NERVOUS SYSTEM

Neurons

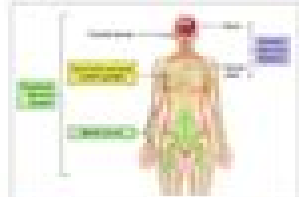

Neurons are the basic units of the nervous system

Neurons are specialized for their function

Neurons are constantly changing

Neurons are connected to each other

Neurons are specialized for their function

Neurons

Neurons are the basic units of the nervous system

Neurons are specialized for their function

Neurons are constantly changing

Neurons are connected to each other

Neurons are specialized for their function

IMMUNE SYSTEM

The immune system is the body's defense system

It is composed of cells that are specialized for their function

Immune cells are constantly changing

Immune cells are connected to each other

Immune cells are specialized for their function

Immune cells

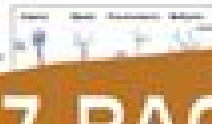

Immune cells are the basic units of the immune system

Immune cells are specialized for their function

Immune cells are constantly changing

Immune cells are connected to each other

Immune cells are specialized for their function

ORGAN SYSTEMS OF THE BODY

The human body is made up of different organ systems

Each organ system has a specific function

Organ systems are specialized for their function

Organ systems are constantly changing

Organ systems are connected to each other

Organ systems are specialized for their function

ENDOCRINE SYSTEM

The endocrine system is the body's hormone system

It is composed of glands that secrete hormones

Hormones are constantly changing

Hormones are connected to each other

Hormones are specialized for their function

Hormones are constantly changing

The endocrine system is the body's hormone system

It is composed of glands that secrete hormones

Hormones are constantly changing

Hormones are connected to each other

Hormones are specialized for their function
