Against Extinction William (Bill) Adams,2013-06-17 Conservation in the 21st century needs to be different and this book is a good indicator of why *Bulletin of British Ecological Society Against Extinction* tells the history of wildlife conservation from its roots in the 19th century through the foundation of the Society for the Preservation of the Wild Fauna of the Empire in London in 1903 to the huge and diverse international movement of the present day It vividly portrays conservation s legacy of big game hunting the battles for the establishment of national parks the global importance of species conservation and debates over the sustainable use of and trade in wildlife Bill Adams addresses the big questions and ideas that have driven conservation for the last 100 years How can the diversity of life be maintained as human demands on the Earth expand seemingly without limit How can preservation be reconciled with human rights and the development needs of the poor Is conservation something that can be imposed by a knowledgeable elite or is it something that should emerge naturally from people s free choices These have never been easy questions and they are as important in the 21st century as at any time in the past The author takes us on a lively historical journey in search of the answers *Zoo & Wild Animal Medicine* Murray E. Fowler,R. Eric Miller,1999 This latest volume remains the only book available that focuses on the medical problems of

captive and free ranging wildlife It features the most current information following the approach and format of previous volumes and conveniently cross indexed to Volume 3 **Re-introduction News** ,2006 *Global Biodiversity World Conservation Monitoring Centre*,2012-12-06 Global Biodiversity is the most comprehensive compendium of conservation information ever published It provides the first systematic report on the status distribution management and utilisation of the planet s biological wealth *New Scientist* ,1989-10 *The Journal of Wildlife Management* ,2003 **Beyond Captive Breeding** J. H. W. Gipps,1991 This volume contains the well known Symposia of the Zoological Society of London with a focus on conservation biology One important strategy for saving endangered wildlife is to take the animals into zoos that have special facilities for managing breeding and care of the young and then when there are sufficient numbers of captive bred individuals to release them back into their natural habitats If all goes well they will survive reproduce and re establish themselves in the wild This book draws together the work of leading practitioners in this developing area of conservation biology They examine methods costs and logistics the role of genetics and ecological considerations and case studies of the golden lion tamarin scimitar horned oryx and red wolf among others Beyond Captive Breeding highlights the advantages and limitations of this approach to conservation and will undoubtedly stimulate further work to improve the success rate of mammal re introductions *New Scientist and Science Journal* ,1989 **Biodiversity and Conservation: Response to biodiversity loss** Richard J. Ladle,2009 Although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word s first appearance in the language in the mid 1980s In 1973 for instance the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also reached said the symposium at a meeting of the Linnaean Society some forty years earlier By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity Indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement Indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies It is increasingly taught and studied in universities and other research institutions around the world Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment Edited by Richard Ladle of Oxford University s Centre for the Environment this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates *The Dodo* ,1989 *Integrating People and Wildlife for a*
