Biology Jake Bernstein,1996

Applications of Computational Intelligence in Biology Tomasz G. Smolinski,Mariofanna G. Milanova,Aboul-Ella Hassanien,2008-05-27 Computational Intelligence CI has been a tremendously active area of search for the past decade or so There are many successful applications of CI in many sub elds of biology including bioinformatics computational nomics protein structure prediction or neuronal systems modeling and an ysis However there still are many open problems in biology that are in d perate need of advanced and e cient computational methodologies to deal with tremendous amounts of data that those problems are plagued by fortunately biology researchers are very often unaware of the abundance of computational

techniques that they could put to use to help them analyze and understand the data underlying their research inquiries On the other hand computational intelligence practitioners are often unfamiliar with the particular problems that their new state of the art algorithms could be successfully applied for The separation between the two worlds is partially caused by the use of different languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of facilitating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other The purpose of this book is to provide a medium for such an exchange of expertise and concerns In order to achieve the goal we have solicited contributions from both computational intelligence as well as biology researchers
