Handbook of Modern Chemistry Inorganic and Organic for the Use of Students Charles Meymott Tidy, 1887 Scientific American, 1856 **Modern Chemical Technology and Emission Control** M.B. Hocking, 2012-12-06 This text of applied chemistry considers the interface between chemistry and chemical engineering using examples of some of the important process in dustries Integrated with this is detailed consideration of measures which may be taken for avoidance or control of potential emissions This new emphasis in applied chemistry has been developed through eight years of experience gained from working in industry in research development and environment al control fields plus twelve years of teaching here using this approach It is aimed primarily towards science and engineering students as well as to envi ronmentalists and practising professionals with responsibilities or an interest in this interface By providing the appropriate process information back to back with emis sions and control data the potential for process fine tuning is improved for both raw material efficiency and emission control objectives This approach also emphasizes integral process changes rather than add on units for emis sion control Add on units have their place when rapid action on an urgent emission problem is required or when control simply is not feasible by pro cess integral changes alone Obviously fundamental process changes for emission containment are best conceived at the design stage However at whatever stage process modifications are installed this approach to control should appeal to the industrialist in particular in that something more sub stantial than decreased emissions may be gained

Modern Aspects of Colloidal Dispersions Ronald H. Ottewill, Adrian R. Rennie, 2012-12-06 This book contains the papers presented at a meeting sponsored by the Colloid and Interface Science Group of the Faraday Division Royal Society of Chemistry which was held at Wills Hall University of Bristol from the 14th to 16th April 1997. The purpose of the meeting which was entitled Colloidal Dispersions was to discuss the subject of concentrated colloidal systems including dispersions, emulsions and powders in order to emphasize recent advances in experimental and theoretical understanding of these systems and how these advances could be applied to practical utilisation in the wide range of industries which are involved with colloidal systems. The papers presented at the meeting were given by the principal participants in a 5 year project on Colloid Technology which started on the 1st August 1992 and was funded by the Department of Trade and Industry (DTI) of the U.K. and a consortium of industries which was composed of ICI, Schlumberger, Unilever and Zeneca. The academic centres involved were the Universities of Bristol, Cambridge, Edinburgh and Imperial College London. Each of the papers published in this volume formed the focus for a discussion on that topic so that each subject was discussed in some depth by the participants. Jean Proctor and Meg Staff have been tremendously helpful as secretaries at Bristol and Cambridge respectively throughout the project. Also their help with the various meetings and with the production of this volume was invaluable. We thank them most warmly for their very able assistance.
