

The Digestive System

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The digestive system also includes accessory organs that help in the process, such as the liver, pancreas, and gallbladder.

Liver, pancreas & gallbladder

After leaving the stomach, digested material enters the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **liver**. The liver is a large organ on the right side of the abdomen. It produces bile, which is stored in the **gallbladder**. Bile then enters the duodenum to help in the digestion of fats.

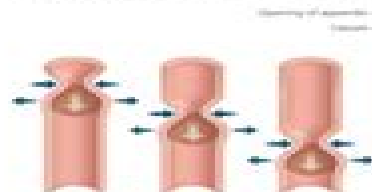

Layers of large intestine

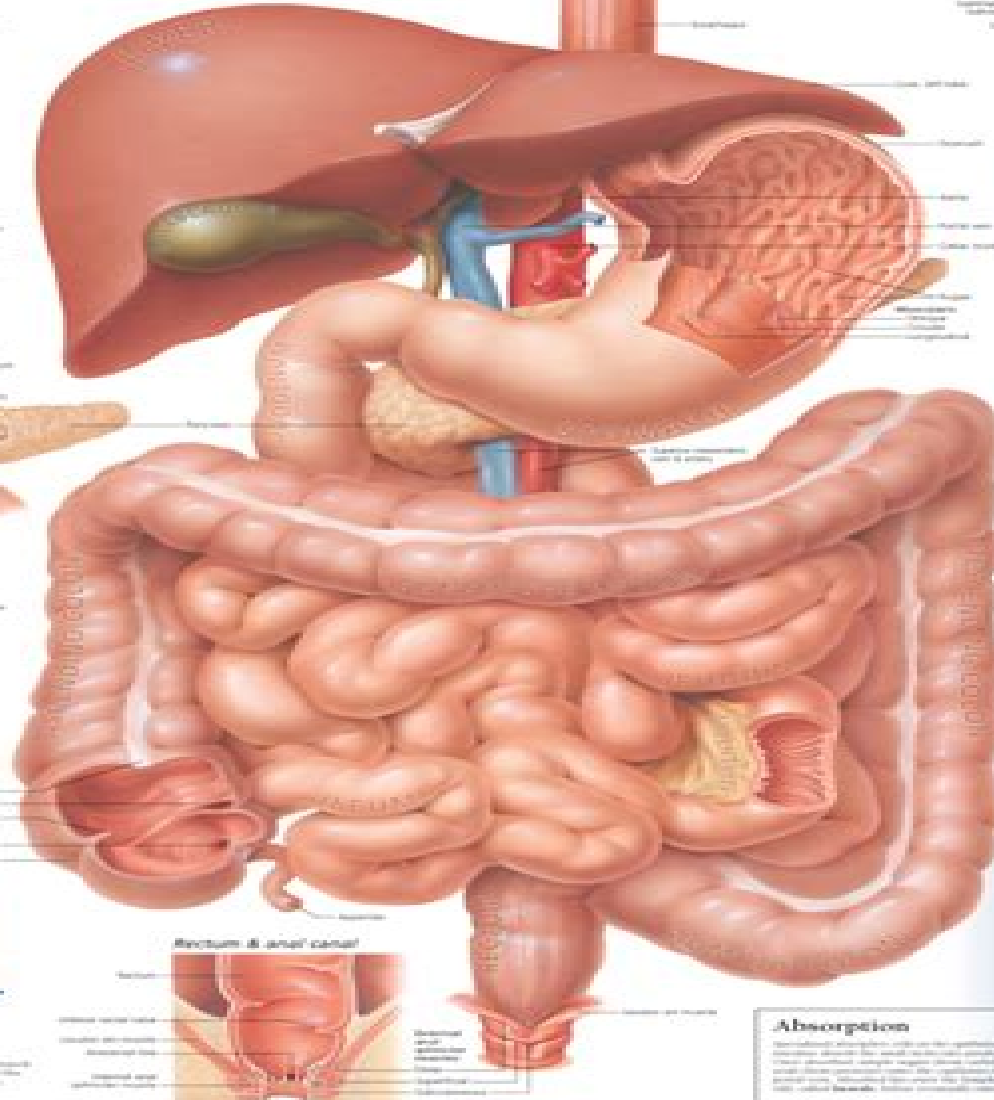

Large intestine

The large intestine consists of the cecum, the ascending colon, the transverse colon, the descending colon, the sigmoid colon, and the rectum. It is responsible for absorbing water and electrolytes from the undigested food, forming feces.

Peristaltic action

Food material is pushed through the digestive system by a series of powerful, rhythmic contractions called peristalsis. These contractions move the food forward and mix it with digestive juices.

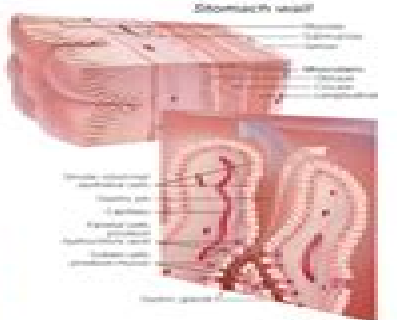

The mouth & salivary glands

Chewing the food breaks it into smaller pieces, making it easier to swallow. Saliva, secreted by the salivary glands, helps in the digestion of starches. It also contains enzymes that help in the digestion of proteins and fats.

The stomach

The stomach is a large, muscular organ that is responsible for the digestion of food. It is located in the upper left part of the abdomen. The stomach wall is composed of several layers, including the mucosa, submucosa, muscularis, and serosa.

Small intestine

The small intestine is a long, coiled tube that is responsible for the digestion of food. It is located in the central part of the abdomen. The small intestine is divided into three parts: the duodenum, the jejunum, and the ileum.

Absorption

Nutrients are absorbed into the blood and lymphatic system through the walls of the small intestine. The villi, which are finger-like projections of the intestinal lining, increase the surface area for absorption.
