

CHAPTER 6 - SKELETAL SYSTEM

COMPONENTS:

- *Bones*
- *Joints & Associated Cartilages*

SKELETAL

- Derived from Greek word meaning "*dried*"
- Consist of dynamic, living tissues that are able to grow, detect pain stimuli, adapt to stress & undergo repair after injury.
- FRAMEWORK to support the soft tissues of the body.

MAJOR FUNCTIONS:

1.) SUPPORT

- Major supporting tissues of the body
- **Cartilages** – provides firm yet flexible support (ex. Nose, external ear, thoracic cage & trachea)
- **Ligaments** – strong bands of fibrous connective tissue that attach to bones & hold them together.

2.) PROTECTION

- Protects the organ it surrounds
(Ex. Skull encloses and protects the brain)

3.) MOVEMENT

- **Tendons** – skeletal muscles attach to bones
- **Smooth Cartilages** – covers the ends of bones within some joints ; allowing the bones to move freely
- **Ligaments** – allow some movements between bones but prevent excessive movements

4.) STORAGE

- **Calcium & Phosphorus** – taken into bones and stored
- * **Adipose tissue** – stored w/in bone cavities (fats)
- **Lipids** – Released into the blood and used by other tissues as a *source of energy*

5.) BLOOD CELL PRODUCTION

- Cavities filled with red bone marrow
 - produces blood cells & platelets

EXTRACELLULAR MATRIX

- *Collagen (Tough rope-like proteins)*
- *Proteoglycans (Polysaccharides)*
- *Tendons (Collagen Fibers)*
- *Ligaments (Collagen Fibers)*
- *Cartilage (Collagen & Proteoglycans)*
- *Hydroxyapatite (Calcium Phosphate Crystals)*

GENERAL FEATURES OF BONE

1. LONG BONES

- Longer than they are wide

2. SHORT BONES

- Broad as they are long

3. FLAT BONES

- Relatively thin, flattened shape

4. IRREGULAR BONES

- Vertebrae & Facial Bones

STRUCTURE OF A LONG BONE

• DIAPHYSIS

- Central Shaft

• EPIPHYSIS

- Two ends

• ARTICULAR CARTILAGE

- covers the ends of the epiphyses where the bone articulates with other bones.

• EPIPHYSEAL PLATE

- Growth plate, where the bone grows in length.
- Composed of cartilage, between each epiphysis and the diaphysis

• EPIPHYSEAL LINE

- When the bone growth stops, this replaces the epiphyseal plate.

• MEDULLARY CAVITY

- Large cavity in the diaphysis

• MARROW

- A soft tissue that fills the spaces
- **Yellow Marrow** – consist of mostly adipose tissues; **Red Marrow** – consist of blood-forming cell and is the only site of blood formation in adults.

• PERIOSTEUM

- Covers most of the outer surface of the bones
- Encloses the diaphysis
- Contains blood vessels and nerves

• ENDOSTEUM

- Thinner connective tissue membrane that lines the surface of the medullary cavity

Ovhal, Dr. Sandeep Anarse, 2022-07-20 The demand for animal protein for human consumption is increasing due to an exponential increase in world population. Aquaculture is becoming an increasingly important source of protein for human consumption as it is an industry capable of providing solutions to feed a rapidly growing population and alleviate poverty in many countries. To achieve this, the scale of aquaculture production and the range of species farmed have increased significantly over the past two decades. Live production always carries the risk of loss from infectious diseases as farming practices in aquaculture make farmed fish more susceptible to diseases from a variety of bacterial infections, viruses, parasites, and fungi than wild fish. Also, the trend towards increasingly dense production systems, disturbances in the balance of ecosystems associated with pollution and climate change, and the expected increase in international transactions in aquaculture products and their derivatives have all contributed to changing the dynamics of interaction between organisms and infectious agents and people. This affects the replication and multiplication rates of pathogens, leading to a wider geographic spread of pathogens and an increase in species affected by outbreaks. This makes disease outbreaks a significant barrier to this industry with a significant impact on the quality, safety, and volume of fish produced worldwide, which can result in foreclosure from market access and economic or significant costs to the producer.

William Lawrence and the Organ of Mind
 Elfed Huw Price, 2025-03-04
 William Lawrence and the Organ of Mind explores the historical origins and ideological valence of the conceptualisation of thought and mind as functions of the brain in early nineteenth-century Britain. Taking as its starting point the controversy provoked by Lawrence's Lectures on Physiology, Zoology, and the Natural History of Man, the book draws on archival and published texts as well as images to reveal overlooked parallels and connections with the concurrent rise of phrenology and the longstanding Christian mortalist tradition. It shows how the sentient brain served as a radical icon marking a break with ancient Galenic medical models and Athanasian religious dogma and charts how, in part through Lawrence's contributions, it was united with a biological vision that identified human exceptionality more directly with the structure and function of our brains. Elfed Huw Price's work indicates that although Lawrence was silenced, his Lectures lived on as a contributor to the rising

tide of Victorian naturalism and part of a wider transformation of beliefs and values that swept aside the ancient politico religious structures of the Confessional State leaving the cerebral organ standing alongside the soul as the source of human reason and a distinguishing feature of humanity
