

Functions of the Lymphatic System

1. Tissue drainage: every day around 21 liters of fluid of plasma, carrying dissolved substances and some plasma protein escape from the arterial end of the capillaries and into the tissues. Most of this fluid is returned directly to the bloodstream via the capillary at its venous end, but the excess, about 3-4 liters of fluid is drained away by the lymphatic vessels.
2. Returns the excess protein to the circulation.
3. Remove waste products and toxins.
4. Fat absorption: fat and fat soluble materials (e.g. fat soluble vitamin) are absorbed into the central lacteals.
5. Essential to the immune system.

Components of Lymphatic System
