Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them

based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching

Culture and Sustainable Development in the City Sacha Kagan, 2022-08-05 This book exposes the potential to advance a cultural approach to sustainable urban development. It explores urban spaces of possibilities and links them to the seized or missed opportunities for innovative forms of transversal partnerships throughout the city and of culturally sensitive urban policies. The call for sustainability brings with it challenges for which, in view of the urgency of social transformation, institutional innovations are necessary. Sustainable urban development will only succeed through creative impulses, experiments, trying out innovative ideas and making alternatives visible in particular through locally rooted urban initiatives, artistic actions and social movements. Discussing many concrete examples from several years of empirical research in the cities of Hanover and Hamburg, Germany, Baltimore and Chicago, USA, Bangalore, India, St. Petersburg, Russia, Singapore and Vancouver, Canada, the book connects urban spaces and their actors, looks at their guiding principles, strategies and concrete practices, and identifies new levers, networks and alliances. Readers will find in this book not only inspiring examples of culture in everyday life in the city but also explanations about the qualities that make local cultural initiatives especially full of potentials and how they may translate into city-wide changes engaging with the whole City as Space of Possibilities. The book will interest researchers and advanced students in the interdisciplinary fields of urban studies, sustainability science, sustainability research, cultural sciences, urban sociology and sociology of the arts, cultural sociology and those interested in the transdisciplinary collaborations between the arts, academia and civil society.
