Neural responses for rehabilitation of the elderly: Evidence from the micro, meso to macro scale Le Li, Chuhuai Wang, Howe Liu, Sheng Li, Wenxin Niu, 2023-06-07 Federal Register, 2013-02 **Activities of daily living and everyday functioning: From normal aging to neurodegenerative diseases** Ondrej Bezdicek, Inga Liepelt-Scarfone, Joaquim Ferreira, Robert Fellows, 2023-04-14 **Sound, Music and Movement in Parkinson's Disease** Marta M. N. Bieńkiewicz, Cathy Craig, 2017-01-05 Recent years have brought new insights to the understanding of Parkinson s disease impact of exercise and sound displays in rehabilitation and movement facilitation There is growing evidence that auditory signals in the environment can provide a temporal template for movement and change the mode of motor control from intrinsic to extrinsic habitual to goal directed enabling enhanced motor performance in patients In addition forced exercise rate studies show that exercising at the pace of healthy adults can have potential neuroprotective benefits for patients Many research groups have explored the use of auditory cues such as rhythmical auditory training in improving gait and upper limb movement parameters Cues are usually either intermittent metronome or continuous dynamic sound displays Similarly dance based interventions suggest that patients benefit from additional sensory information i e the temporal structure

embedded in music and proprioceptive information from a dancing partner that facilitates movement. On the contrary, studies dedicated to auditory perception and motor timing report an impaired ability of patients to perceive and synchronise with complex rhythmical structures i.e. causing an inability to play musical instruments. With the growth of modern technology and the increasing portability of high specification devices such as smart phones, new research questions on the design of interventions are beginning to emerge as we strive for more efficient therapeutic approaches. In this Research Topic, we wanted to bring together top scientists from the movement disorder, motor control and sound-related studies along with therapists. That way, we can engage in cross-disciplinary and challenging scientific debate about future rehabilitation avenues and frontiers for Parkinson's disease patients.

A Contribution to the Empirics of Economic Development Klaus Gründler, 2018-06-08

Why are some nations rich and others poor? What are the sources of long-run economic development and growth? How can living standards be increased? In this book, Klaus Gründler empirically analyses these central economic questions and puts a particular emphasis on the role of technology, inequality and political institutions. To substantiate his empirical studies, he introduces a new method to compute composite measures and indices that is based on mathematical algorithms from the field of machine learning.

Emerging Research on Social Security and Population Health: New Opportunities and Challenges Weike Zhang, Tang Shangfeng, Bishwajit Ghose, 2024-06-12

The academic circle has discussed the relationship between social security and population health from various perspectives, including the mechanism and economic outcomes of social security affecting health, the impact of population health on social security sustainability etc. Despite these aspects, it is noteworthy that in recent years, some new factors have emerged in the economic and social environment which need to be taken into consideration. For example, the rapid development of digital medical technology has improved the operation efficiency and health effect of medical insurance, while population aging may be detrimental to the health of older adults and increase their

health burden by reducing the size of pensions In addition complex environmental changes can make the relationship between social security and population health more difficult to grasp These new factors all requires more research to analyze
