Morphogenesis (Thigmomorphogenesis) and Ecological Significance Catherine Coutand,Stephen J. Mitchell,Sara
Puijalon,Gabrielle Monshausen,2017-01-27 During the 1970s renewed interest in plant mechanical signaling led to the
discovery that plants subjected to mechanical stimulation develop shorter and thicker axes than undisturbed plants a
syndrome called thigmomorphogenesis Currently mechanosensing is being intensively studied because of its involvement in
many physiological processes in plants and particularly in the control of plant morphogenesis From an ecological point of
view the shaping of plant architecture has to be precisely organized in space to ensure light capture as well as mechanical
stability In natural environments terrestrial plants are subjected to mechanical stimulation mainly due to wind but also due to
precipitation while aquatic and marine plants are subjected to current and wave energy Plants acclimate to mechanically
challenging environments by sensing mechanical stimulations and modifying their growth in length and diameter and their
tissue properties to reduce potential for buckling or breakage From a morphogenetic point of view both external and internal
mechanical cues play an important role in the control of cell division and meristem development likely by modulating
microtubule orientation How mechanical stimulations are being sensed by plants is an area of intense research Different
types of mechanosensors have been discovered or proposed including ion channels gated by membrane tension stretch
activation and plasma membrane receptor like kinases that monitor the cell wall deformations Electrophysiologists have
measured the conductances of some stretch activated channels and have showed that SAC of different structures can exhibit
different conductances The role of these differences in conductance has not yet been established Once a mechanical stimulus
has been perceived it must be converted into a biological signal that can lead to variations of plant phenotype Calcium has
been shown to function as an early second messenger tightly linked with changes in cytosolic and apoplastic pH
Transcriptional analyses of the effect of mechanical stimulation have revealed a considerable number of differentially
expressed genes some of which appear to be specific to mechanical signal transduction These genes can thus serve as
markers of mechanosensing for example in studies attempting to define signalling threshold or variations of
mechanosensitivity accommodation Quantitative biomechanical studies have lead to a model of mechanoperception which
links mechanical state and plant responses and provides an integrative tool to study the regulation of mechanosensing This
model includes parameters sensitivity and threshold that can be estimated experimentally It has also been shown that plants

are desensitized when exposed to multiple mechanical signals as a function of their mechanical history Finally mechanosensing is also involved in osmoregulation or cell expansion The links between these different processes involving mechanical signalling need further investigation This frontier research topic provides an overview of the different aspects of mechanical signalling in plants spanning perception effects on plant growth and morphogenesis and broad ecological significance CBSE (Central Board of Secondary Education) Class XI Science - Biology Topic-wise Notes | A Complete Preparation Study Notes with Solved MCQs Mr. Rohit Manglik,2023-07-07 EduGorilla s CBSE XI Science Biology Study Notes are the best selling notes for Class XI exams Their content is well researched and covers all topics related to CBSE XI Science Biology The notes are designed to help students prepare thoroughly for their exams with topic wise notes that are comprehensive and easy to understand The notes also include solved multiple choice questions MCQs for self evaluation allowing students to gauge their progress and identify areas that require further improvement These notes include Topics such as The Living World Plant Kingdom Morphology of Flowering Plants Biomolecules Respiration in Plants Body Fluids and Circulation These notes are perfect for understanding the pattern and type of questions asked by CBSE These study notes are tailored to the latest syllabus of CBSE XI Science Biology exams making them a valuable resource for exam preparation
