CIRCULATORY SYSTEM

I. Identify the parts of the human heart.

1. superior vena cava
2. right pulmonary artery
3. right pulmonary veins
4. pulmonary valve
5. right atrium
6. tricuspid valve
7. right ventricle
8. inferior vena cava
9. arteries
10. aorta
11. left pulmonary artery
12. left pulmonary veins
13. left atrium
14. bicuspid valve
15. aortic valve
16. left ventricle
17. interventricular septum

II. Complete the following scheme of blood circulation in the human body.

Oxygen-poor blood enters the right atrium through the tricuspid valve to the right ventricle. Through the pulmonary valve, blood is pumped to the pulmonary trunk then to the left pulmonary artery reaching capillary beds of the lungs. From the lungs, oxygen rich blood goes and enters to the pulmonary veins to the left atrium of the heart then through the bicuspid valve to the chamber called left ventricle. Oxygen rich blood will exit the heart through the aortic valve to the largest artery called aorta. Blood will reach the systemic arteries to the capillaries of the tissues to the systemic veins to the superior vena cava and inferior vena cava returning to the right atrium of the heart.

III. Identify the different types of blood vessels in the picture.

Answers For Cardiovascular System:

Cardiovascular System: Questions and Answers: An Aid for Learners Urban John Arnold D'Souza, Mohd Firdaus bin Mohd Hayati, Firrul bin Masnah @ Kadir, Nornazirah binti Azizan, Vishnudas Prabhu, 2021-08-19 This short book focuses on the possible examination questions and their answers on the cardiovascular system. In the era of modern technology and the internet of things, student learning has gone beyond the approved textbooks and teachers due to the overload of information that is easily available on the internet using different search engines. The trend and fashion are so deep rooted to the extent that the Google search engine is the Bible for everyone. These days students do a common mistake of going through information overload and assuming the information available on the web as knowledge. It is very well true for medical students; information overload confuses the mind and focus of study. This book aids a learner of the cardiovascular system to know the appropriate depth of knowledge that one needs to know. In the evaluation-based academic assessment, student knowledge is measured by different methods of assessment tools such as written examinations such as long essay, short essay, viva voce, etc. This book provides comprehensive and concise knowledge based on a question so that a student develops an awareness that helps to frame the answer required for a question. [101 Questions about Blood and Circulation, 2nd Edition](#)

Faith Hickman Brynie, 2013-01-01 As in previous books in this critically acclaimed series, Brynie polled hundreds of high school students across the country to find out what they wanted to know most about blood and circulation. Using an accessible question and answer format, Brynie helps readers discover and learn facts about the blood and circulation in the human body. Brynie's appealing and clear writing style makes learning about blood and circulation as easy as donating blood to the blood bank.

 Hypertension or high blood pressure affects an estimated 50 million Americans and is a major contributor to cardiovascular
 disease the leading cause of death in the United States Through proper management the effects of hypertension can be
 minimized Dr William Manger s 101 Questions it s also responsible for more than 52 million lost workdays In addition every
 year more than one million people suffer heart attacks and 600 000 suffer strokes a large percentage of both proving fatal
 However Dr Manger is convinced these statistics can be reduced Inspired by the decrease in the incidence of heart attack
 and stroke Manger saw that with improved medical management and healthy lifestyle changes hypertension could be
 controlled and its complications minimized or prevented He believes a close patient doctor relationship and a clear
 understanding of what hypertension is and how to manage it is essential for bringing it under control and minimizing the risk
 of further health complications Even though Manger is positive overall about statistics still there is room for improvement
 nearly 30% of people suffering from hypertension go undiagnosed and only 27% of the 50 million people with this condition
 have their blood pressure under control 101 Questions Answers About Hypertension seeks to reduce the statistical gap by
 giving readers a comprehensive understanding of hypertension so they are able to knowledgeably communicate with their
 doctors and make informed decisions and choices to improve their health and reduce health risk Crash Course

Young, 2010 Although cardiac output is measured as the flow of blood from the left ventricle into the aorta the system that controls cardiac output includes many other components besides the heart itself The heart's rate of output cannot exceed the rate of venous return to it and therefore the factors governing venous return are primarily responsible for control of output from the heart Venous return is affected by its pressure gradient and resistance to flow throughout the vascular system The pressure gradient for venous return is a function of several factors including the blood volume flowing through the system the unstressed vascular volume of the circulatory system its capacitance mean systemic pressure and right atrial pressure Resistance to venous return is the sum of total vascular resistance from the aortic valve to the right atrium The sympathetic nervous system and vasoactive circulating hormones affect short term resistance whereas local tissue blood flow autoregulatory mechanisms are the dominant determinants of long term resistance to venous return The strength of contraction of the heart responds to changes in atrial

pressure driven by changes in venous return with small changes in atrial pressure eliciting large changes in strength of contraction as described by the Frank Starling mechanism In addition the autonomic nervous system input to the heart alters myocardial pumping ability in response to cardiovascular challenges The function of the cardiovascular system is strongly affected by the operation of the renal sodium excretion body fluid volume arterial pressure negative feedback system that maintains arterial blood pressure at a controlled value over long periods The intent of this volume is to integrate the basic knowledge of these cardiovascular system components into an understanding of cardiac output regulation Table of Contents Introduction Venous Return Cardiac Function Integrated Analysis of Cardiac Output Control Analysis of Cardiac Output Regulation by Computer Simulation Analysis of Cardiac Output Control in Response to Challenges Conclusion References Author Biography
