Wearable Interaction Vivian Genaro Motti, 2020-01-01 This book offers the reader a comprehensive view of the design space of wearable computers cutting across multiple application domains and interaction modalities Besides providing several examples of wearable technologies *Wearable Interaction* illustrates how to create and to assess interactive wearables considering human factors in design decisions related to input entry and output responses The book also discusses the impacts of form factors and contexts of use in the design of wearable interaction Miniaturized components flexible materials

and sewable electronics toolkits exemplify advances in technology that facilitated the design and development of wearable technologies. Despite such advances, creating wearable interfaces that are efficient is still challenging. The new affordances of on-body interfaces require the consideration of new interaction paradigms so that the design decisions for the user interaction take into account key limitations in the interaction surfaces of wearables concerning input entry, processing power for output responses, and in the time and attention that wearers dedicate to complete their interaction. Under such constraints, creating interfaces with high usability levels is complex. Also, because wearables are worn continuously and in close contact with the human body, on-body interfaces must be carefully designed to neither disturb nor overwhelm wearers. The context of use and the potential of wearable technologies must be both well understood to provide users with relevant information and services using appropriate approaches and without overloading them with notifications. Wearable Interaction explains thoroughly how interactive wearables have been created, taking into account the needs of end users as well as the vast potential that wearable technologies offer. Readers from academia, industry, or government will learn how wearables can be designed and developed to facilitate human activities and tasks across different sectors.

Designing for Inclusion Patrick Langdon,Jonathan Lazar,Ann Heylighen,Hua Dong,2020-04-16 This proceedings book presents papers from the 10th Cambridge Workshops on Universal Access and Assistive Technology The CWUAAT series of workshops have celebrated a long history of interdisciplinarity including design disciplines computer scientists engineers architects ergonomists ethnographers ethicists policymakers practitioners and user communities This reflects the wider increasing realisation over the long duration of the series that design for inclusion is not limited to technology engineering disciplines and computer science but instead requires an interdisciplinary approach The key to this is providing a platform upon which the different

disciplines can engage and see each other's antecedents, methods and point of view. This proceedings book of the 10th CWUAAT conference presents papers in a variety of topics including Reconciling usability, accessibility and inclusive design; Designing inclusive assistive and rehabilitation systems; Designing cognitive interaction with emerging technologies; Designing inclusive architecture; Data mining and visualising inclusion; Legislation, standards and policy in inclusive design; Situational inclusive interfaces; and The historical perspective: 20 years of CWUAAT. CWUAAT has always aimed to be inclusive in the fields that it invites to the workshop. We must include social science, psychology, anthropology, economics, politics, governance and business. This requirement is now energised by imminent new challenges arising from techno-social change. In particular, artificial intelligence, wireless technologies and the Internet of Things generate a pressing need for more socially integrated projects with operational consequences on individuals in the built environment and at all levels of design and society. Business cases and urgent environmental issues such as sustainability and transportation should now be a focus point for inclusion in an increasingly challenging world. This proceedings book continues the goal of designing for inclusion as set out by the CWUAAT when it first started.
