Dissemination and Implementation of Evidence-based Practices in Child and Adolescent Mental Health Rinad S. Beidas, Philip C. Kendall, 2014 Mental health disorders are common in youth impacting up to 1 in 5 children and adolescents Typically mental health difficulties result in impaired functioning and lower quality of life for both youth and their families Fortunately there are psychosocial treatments for the mental health needs of youth that have earned the evidence based label However these treatments are not widely available and it is estimated that it can take up to 17 years for them to be transported into community settings As a result a new field of dissemination and implementation DI science has emerged to address this problem Dissemination refers to the transfer of information about evidence based practices to community settings and implementation refers to active strategies to assist adoption of evidence based practices in community settings

Biofeedback and Family Practice Medicine William H. Rickles, Jack H. Sandweiss, David Jacobs, Robert N. Grove, Eleanor Criswell, 2012-12-06. During the past five years, there has been a reawakening of interest in the psychotherapy of patients with medical disorders characterized as psychosomatic. For three decades, psychoanalysis and psychoanalytic psychotherapy were used extensively to treat and study psychosomatic disorders. Early in the 1960s, interest in this approach to these conditions faded, and the Psychosomatic Service in most hospitals became the Consultation Liaison Service. Lipowski, 1967. The recent focus of biofeedback on psychosomatic conditions provides a new technique with which the physician or psychiatrist may treat these patients. Rickles, 1981. In addition, the successful application of biofeedback training to a variety of complaints such as those presented in this volume has heralded the addition of biofeedback to the treatment modalities used for medical complaints. Frequently, psychological factors can still be seen, for example, when biofeedback treatment may require lifestyle changes on the part of the patient, the exploration of secondary gains or resistances before the disorder can be successfully treated, and the establishment of rapport and empathy, which is so important for truly effective biofeedback training. Aside from certain psychological dimensions that are always present in biofeedback training, in this case, biofeedback is being used in a primarily medical setting for primarily medical complaints.
