

Human Reproductive System Unit Review Worksheet

Directions: Correct your worksheet using a colored pen that is contrasting to what you used to fill this out.

1. Label the diagram below.

Female Reproductive Organs

Male Reproductive Organs

A. Ovary

B. Uterus

C. Fallopian Tubes

D. Vagina

E. Vas deferens

F. Urethra opening

G. Testes

H. Epididymis

I. Prostate

J. Cervix

2. List the male parts, in order, for which sperm and semen are produced and released.

Testes → Epididymis → Vas deferens → Prostate → Urethra opening

3. List the female parts, in order, for which an egg/ovum is created and released.

Ovary → Fallopian Tube → Uterus → Cervix → Vagina

4. A. What two hormones trigger sexual maturity? LH & FSH

B. What is another term for sexual maturity? Puberty

C. When would a boy reach sexual maturity? When sperm is produced

D. When would a girl reach sexual maturity? When an egg is produced, or menstruation has occurred

Animal Models of Human Cognitive Aging Jennifer L. Bizon, Alisa Woods, 2008-11-12 Significant improvements in lifestyle and medical science are leading to an ever increasing elderly population in the United States and other developed nations The U S census bureau estimates that the number of people over 65 will nearly double by 2030 and that the elderly will comprise nearly one fifth of the world s entire population within the next 20 years In Animal Models of Human Cognitive Aging Jennifer Bizon Alisa Woods and a panel of international authorities comprehensively discuss the use of animal models as a tool for understanding cognitive changes associated with the aging process The book provides substantive background on the newest and most widely used animal models in studies of cognition and aging while detailing the normal and pathological processes of brain aging of humans in relation to those models Additional chapters comprehensively review frontal cortical deficits and executive function in primates as related to humans and the use of transgenic modulation in mice to model Alzheimer s and other age related diseases Groundbreaking and authoritative Animal Models of Human Cognitive Aging provides a valuable resource for Neuroscientists Gerontological Scientists and all aging medicine researchers while serving as a primer for understanding current brain aging studies

Intrinsic motivations and open-ended development in animals, humans, and robots Gianluca Baldassarre, Tom Stafford, Marco Mirolli, Peter Redgrave, Richard Michael Ryan, Andrew Barto, 2015-02-10 The aim of this Research Topic for Frontiers in Psychology under the section of Cognitive Science and Frontiers in Neurorobotics is to present state of the art research whether theoretical empirical or computational investigations on open ended development driven by intrinsic motivations The topic will address

questions such as How do motivations drive learning How are complex skills built up from a foundation of simpler competencies What are the neural and computational bases for intrinsically motivated learning What is the contribution of intrinsic motivations to wider cognition Autonomous development and lifelong open ended learning are hallmarks of intelligence Higher mammals and especially humans engage in activities that do not appear to directly serve the goals of survival reproduction or material advantage Rather a large part of their activity is intrinsically motivated behavior driven by curiosity play interest in novel stimuli and surprising events autonomous goal setting and the pleasure of acquiring new competencies This allows the cumulative acquisition of knowledge and skills that can later be used to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans artistic creativity scientific discovery and subjective well being owe much to them The study of intrinsically motivated behavior has a long history in psychological and ethological research which is now being reinvigorated by perspectives from neuroscience artificial intelligence and computer science For example recent neuroscientific research is discovering how neuromodulators like dopamine and noradrenaline relate not only to extrinsic rewards but also to novel and surprising events how brain areas such as the superior colliculus and the hippocampus are involved in the perception and processing of events novel stimuli and novel associations of stimuli and how violations of predictions and expectations influence learning and motivation Computational approaches are characterizing the space of possible reinforcement learning algorithms and their augmentation by intrinsic reinforcements of different kinds Research in robotics and machine learning is yielding systems with increasing autonomy and capacity for self improvement artificial systems with motivations that are similar to those of real organisms and support prolonged autonomous learning Computational research on intrinsic motivation is being complemented by and closely interacting with research that aims to build hierarchical architectures capable of acquiring storing and exploiting the knowledge and skills acquired through intrinsically motivated learning Now is an important moment in the study of intrinsically motivated open ended development requiring contributions and integration across a large number of fields within the cognitive sciences This Research Topic aims to contribute to this effort by welcoming papers carried out with ethological psychological neuroscientific and computational approaches as well as research that cuts across disciplines and approaches

Veterinary Toxicology Ramesh C Gupta, 2011-04-28 *Veterinary Toxicology* 2nd edition is a unique single reference that teaches the basic principles of veterinary toxicology and builds upon these principles to offer an essential clinical resource for those practicing in the field This reference book is thoroughly updated with new chapters and the latest coverage of topics that are essential to research veterinary toxicologists students professors clinicians and environmentalists Key areas include melamine and cyanuric acid toxicogenomics veterinary medical geology toxic gases toxicity and safety evaluation of new veterinary pharmaceuticals and much more The 2nd edition of this popular book represents the collective wisdom of leading contributors worldwide and continues to fill an undeniable need in the literature relating to veterinary toxicology New

chapters covering important and timely topics such as melamine and cyanuric acid toxicogenomics toxic gases and veterinary medical geology Expanded look at international topics such as epidemiology of animal poisonings regulatory guidelines and poisonous plants in Europe Heavily contributed book with chapters written by qualified and well experienced authorities across all areas of veterinary toxicology Problem solving strategies are offered for treatment as well as in depth knowledge of the basic mechanisms of veterinary toxicology **Toxicity Bibliography** ,1977 Departments of Labor, Health and Human Services, Education, and Related Agencies Appropriations for Fiscal Year 1986: Department of Health and Human Services United States.
