Willoughby,2014-12-31

Stephen S Willoughby has taught mathematics for 59 years and he has seen everything Some of it has annoyed him some has inspired him This little book is something of a valedictory and he shares some parting thoughts as he contemplates the end of his teaching career Willoughby has strong cogent and mostly negative opinions about textbooks standardized testing and teacher training These opinions have been forged in the cauldron of the classroom of a deeply caring teacher They might not please readers but they ought to make them think They should spark needed debate in our community Ultimately this is a human tale with rough parallels to Hardy s A Mathematician s Apology replace mathematicians with teachers perhaps Every teacher will sympathize with Willoughby s frustrations and empathize with the humanity and compassion that animated his life s work and that beat at the center of this book

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee,2006-11-05 The Committee s report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14 19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

what we know about contemporary educational improvement transformation and change It will provide insights into what strategies work long term to build the capacity for principled change at the school and system level The book will consider what leaders can do to secure principled school and system improvement which fully embraces diversity equity and equality It will also dispel some myths about reform at scale and challenge some prevailing ideas about educational change that it will be posited are not helping many young people to reach their potential The main argument of the book is that too many school and system improvement initiatives have not paid sufficient attention to equity issues in their pursuit of ever higher achievement and that the net effect of large scale international assessments have been to distract policy makers in ways that have not always benefitted young people The book will use system examples to underpin and exemplify six core ways of re botting the system and generating progress for all It will highlight the implications for school and system leaders
