

Surface Weather Map Showing Storm System in the Eastern United States

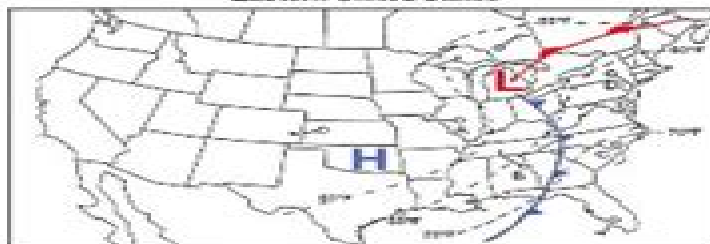

Figure 2. Simplified surface weather map showing a storm system in the eastern US.

Warm air advection occurs where the wind flows across isotherms from higher pressure (closer to lower latitude) values. Thus, warm air is being transported across a cold front by the low-level winds. Based on this fact alone, one would expect precipitation at that location to be rising, cold air advection occurs where the wind flows across the isotherms from lower (colder) values to higher (warmer) values. Thus, cold air is being transported by the wind to a warm location, producing falling temperatures.

Based on wind directions and the isotherm pattern on the Figure 2 map, determine the type of air advection (warm or cold) that would be occurring at each station.

3. Winds at station two are occurring at Station _____.

- ☐ A
- ☐ B
- ☐ C
- ☐ D

4. Could air advection occur occurring at Station _____.

- ☐ B
- ☐ C
- ☐ D

5. Considering the fact that depression of wind speed compresses pressure associated with moisture updrafts, some southeast of Low can be expected to have _____ air advection.

- ☐ warm
- ☐ cold

6. Meanwhile, some to the west and southwest of Low can be expected to have _____ air advection.

- ☐ warm
- ☐ cold

7. Areas to the east of High can be expected to have _____ air advection.

- ☐ warm
- ☐ cold

8. And while you choose here that rising weather based on the model of a high, areas to the west of High should have _____ air advection.

- ☐ warm
- ☐ cold

Answer Key Weather Studies Investigation Manual

Judd E. Hollander

Answer Key Weather Studies Investigation Manual:

Reviewing **Answer Key Weather Studies Investigation Manual**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is actually astonishing.
