The Role of Ecological Chemistry in Pollution Research and Sustainable Development Ali Mufit Bahadir, George Duca, 2009-08-03 Sustainable Development has become the leading concept of the 21 century It describes a development which agrees with the needs of the present generation but does not endanger the chances of the coming generations to satisfy also their needs Sustainable development has become an important general goal for all fields of life like economy ecology and social balance The development and shaping of our future has been discussed internationally like on the summits of the Conferences in Rio and in Johannesburg But this is also a topic on national base in various countries Leading authorities in various fields of economy and politics have also accepted this concept Although the concept of sustainable development has been generally accepted there are still problems how to achieve and evaluate these general goals It is clear that the definitions about the prime needs vary from man to man from country to country and from continent to continent But pollution does not respect national borders Therefore it is necessary to develop the politics of economy ecology and social demands by a synergistic way that they are strengthened by each other If it is not possible to stop tendencies which threaten the future quality of life the cost demands of societies will dramatically increase and negative tendencies will become irreversible *Student Study Guide and Solutions Manual to Accompany General, Organic, and Biochemistry* Katherine J.
