Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited

Williams,2001 Comprising the proceedings of the Tenth International Symposium on Reactor Dosimetry held in Osaka Japan in September 1999 this volume contains some 100 papers plus three keynote speeches arranged in seven sections that cover the technical scope of the symposium The first two sections consist of Sensor Networks in Structural Health Monitoring: From Theory to Practice Eleni Chatzi,Vasilis K. Dertimanis,2021-05-05 The intense development of novel data driven and hybrid methods for structural health monitoring SHM has been demonstrated by field deployments on large scale systems including transport wind energy and building infrastructure The actionability of SHM as an essential resource for life cycle and resilience management is heavily dependent on the advent of low cost and easily deployable sensors Nonetheless in optimizing these deployments a number of open issues remain with respect to the sensing side These are associated with the type configuration and eventual processing of the information acquired from these sensors to deliver continuous behavioral signatures of the monitored structures This book discusses the latest advances in the field of sensor networks for SHM The focus lies both in active research on the theoretical foundations of optimally deploying and operating sensor networks and in those technological developments that might designate the next generation of sensing solutions targeted for SHM The included contributions span the complete SHM information chain from sensor design to configuration data interpretation and triggering of reactive action The featured papers published in this Special Issue offer an overview of the state of the art and further proceed to introduce novel methods and tools Particular attention is given to the treatment of uncertainty which inherently describes the sensed information and the behavior of monitored systems Proceedings - Institution of Radio Engineers Institution of Radio Engineers, Australia,1961 **Books In Print 2004-2005** Ed Bowker Staff,Staff Bowker, Ed,2004 **Proceedings** ,1961 *Government-wide Index to Federal Research & Development Reports* ,1967 *International Aerospace Abstracts* ,1984 *Eighth International Conference on Antennas and Propagation, 30 March - 2 April 1993* ,1993 **Algorithms for Synthetic Aperture Radar Imagery VI** Edmund G.
