Arduino Repeater Controller:

Get Started With Arduino The Makers of HackSpace magazine, 2019-01-01 Arduino and Arduino compatible microcontrollers are essentially simple computers that we can easily embed in our projects They enable us to sense input and create output in a huge number of ways Buttons touchsensitive areas environmental sensors and more can feed into these computers Lights sound movements and more can feed out Controlling these with a little bit of programmable logic allows us to create devices with a huge range of interactions This all sounds very computer y but Arduinos are designed to be embedded so are often hidden away in things that don t look like computers We look at some fantastic projects that showcase the range of things you can make with these microcontrollers It s become a cliché to say that the only limit is your imagination but these boards are sufficiently powerful and flexible to mean that it s very nearly true You can add interactions simple or complex to almost any project What s even better is that they re designed to be easy to use Projects include Build a four legged walking robot Create a Tetris inspired clock Grow your own veg with hydroponics Make music with a DIY synthesizer And much more Now that you ve picked up this book it s time to get started and create your own amazing Arduino project
