Houses from Books Daniel D.

Reiff, 2010-11-01 Many homes across America have designs based on plans taken from pattern books or mail order catalogs. In *Houses from Books* Daniel D. Reiff traces the history of published plans and offers the first comprehensive survey of their influence on the structure and the style of American houses from 1738 to 1950. *Houses from Books* shows that architectural publications from Palladio's *I Quattro Libri* to Aladdin's *Ready Cut Homes* played a decisive role in every aspect of American domestic building. Reiff discusses the people and the firms who produced the books as well as the ways in which builders and architects adapted the designs in communities throughout the country. His book also offers a wide ranging analysis of the economic and social conditions shaping American building practices. As architectural publication developed and grew more sophisticated it played an increasingly prominent part in the design and the construction of domestic buildings. In villages and small towns which often did not have professional architects the publications became basic resources for carpenters and builders at all levels of expertise. Through the use of published designs they were able to choose among a variety of plans, styles and individual motifs and engage in a fruitful dialogue with past and present architects. *Houses from Books* reconstructs this dialogue by examining the links between the published designs and the houses themselves. Reiff's book will be indispensable to architectural historians, architects, preservationists and regional historians. Realtors and homeowners will also find it of great interest. A catalog at the end of the book can function as a guide for those attempting to locate a model and a date for a particular design. *Houses from Books* contains a wealth of photographs, many by the author that enhance its importance as a history and guide.

Designing Commercial Interiors Christine M. Piotrowski, Elizabeth A. Rogers,

IIDA, 2012-06-14 The definitive reference on designing commercial interiors expanded and updated for today's facilities. Following the success of the ASID Polsky Prize Honorable Mention in 1999, authors Christine Piotrowski and Elizabeth Rogers have extensively revised this guide to planning and designing commercial interiors to help professionals and design students successfully address today's trends and project requirements. This comprehensive reference covers the practical and aesthetic issues that distinguish commercial interiors. There is new information on sustainable design, security and accessibility, three areas of increased emphasis in modern interiors. An introductory chapter provides an overview of commercial interior design and the challenges and rewards of working in the field and stresses the importance of understanding the basic purpose and functions of the client's business as a prerequisite to designing interiors. This guide also gives the reader a head start with eight self-contained chapters that provide comprehensive coverage of interior design for specific types of commercial facilities ranging from offices to food and beverage facilities and from retail stores to health care facilities. Each chapter is complete with a historical overview, types of facilities, planning and interior design elements, design applications, a summary, references and Web sites. New design applications covered include spas in hotels, bed and breakfast inns, coffee shops, gift stores and salons, courthouses and courtrooms and golf clubhouses. In keeping with the times there are

new chapters focusing on senior living facilities and on restoration and adaptive use A chapter on project management has been revised and includes everything from proposals and contracts to scheduling and documentation Throughout the book design application discussions illustrations and photographs help both professionals and students solve problems and envision and implement distinctive designs for commercial interiors With information on licensing codes and regulations along with more than 150 photographs and illustrations this combined resource and instant reference is a must have for commercial interior design professionals students and those studying for the NCIDQ licensing exam Companion Web site www.wiley.com/go/commercialinteriors Graph Theory Applications L.R. Foulds, 1995-01-20 The first part of this text covers the main graph theoretic topics connectivity trees traversability planarity colouring covering matching digraphs networks matrices of a graph graph theoretic algorithms and matroids These concepts are then applied in the second part to problems in engineering operations research and science as well as to an interesting set of miscellaneous problems thus illustrating their broad applicability Every effort has been made to present applications that use not merely the notation and terminology of graph theory but also its actual mathematical results Some of the applications such as in molecular evolution facilities layout and traffic network design have never appeared before in book form Written at an advanced undergraduate to beginning graduate level this book is suitable for students of mathematics engineering operations research computer science and physical sciences as well as for researchers and practitioners with an interest in graph theoretic modelling

Architecture's New Media Yehuda E. Kalay, 2004 A comprehensive examination of computer aided architectural design and its potential effect on architectural design practice for practitioners educators students and researchers Computer aided design CAD technology has already changed the practice of architecture and it has the potential to change it even more radically With *Architecture's New Media* Yehuda Kalay offers a comprehensive exposition of the principles methods and practices that underlie architectural computing He discusses the aspects of information technology that are pertinent to architectural design analyzes the benefits and drawbacks of particular computational methods and looks at the potential of emerging computational techniques to affect the future of architectural design CAD technology introduced in the postwar era and adopted in everyday architectural practice beginning in the 1970s is now so indispensable that as William Mitchell observes in his foreword architectural practice without it is as unimaginable as writing without a word processor Yet Kalay argues it has had little qualitative effect This book provides a detailed introduction for practitioners educators students and researchers to aspects of CAD that go beyond the improvements in drafting modeling and rendering for which it is commonly used Computer aided architectural design CAAD is capable of modeling and manipulating objects not merely their graphical representations reasoning about and predicting performance of design solutions generating new design solutions through algorithmic and other methods managing vast amounts of information and taking advantage of opportunities offered by the Internet for collaboration across time and space and for design of the virtual space of the Internet itself *Architecture's New*

Media covers five main topics design methods and computer technology and the relationship between computers and design the principles of communication and representation generative design methods the advantages of computational methods for predicting and evaluating the performance of design solutions and current and future developments in technology including collaborative design intelligent design assistants construction automation and virtual design environments
