Reading Architectural History Dana Arnold, 2003-09-02 Architectural history is more than just the study of buildings Architecture of the past and present remains an essential emblem of a distinctive social system and set of cultural values and as a result it has been the subject of study of a variety of disciplines But what is architectural history and how should we read it Reading Architectural History examines the historiographic and socio cultural implications of the mapping of British architectural history with particular reference to eighteenth and nineteenth century Britain Discursive essays consider a range of writings from biographical and social histories to visual surveys and guidebooks to examine the narrative structures of histories of architecture and their impact on perception and understanding of the architecture of the past Alongside this each chapter cites canonical histories juxtaposed with a range of social and cultural theorists to reveal that these writings are richer than we have perhaps recognised and that architectural production in this period can be interrogated in the same way as that from more recent past and can be read in a variety of ways The essays and texts combine to form an essential course reader for methods and critical approaches to architectural history and more generally as examples of the kind of evidence used in the formation of architectural histories while also offering a thematic introduction to architecture in Britain and its social and cultural meaning **Architectural Notes on German Churches, with Remarks on the Origin of Gothic Architecture** William Whewell, 1835

The Ocean as a Creative Experience Juergen Claus, 2023-03-31 This book by artist diver and editor in chief of an underwater magazine Juergen Claus is a milestone among the books dedicated to the planet sea It is a knowledge rich overview created from facts and experiences of three main themes that have never been described in context Marine architectures from both the Pacific and Atlantic regions have now moved from vision to reality Whether it is a sail shaped architecture in Noumea or a whale shaped one in the Arctic region Special attention is paid by Prof Claus to post disaster architecture The book will encourage young readers to design metabolic buildings themselves That the seascape has also become a fluid studio for visual artists may come as a surprise The works of art some of which the author has experienced first hand have intertwined with an ecological sustainable way of working And this is also true to a

special degree for the sound artists They realize their sonic worlds with recordings from the sounding world underwater a concert hall of hitherto unknown dimensions The author s experience as a professor of media art with students flows into the description of multimedia or media related ocean installations Here the book becomes a stimulus for realizing one s own experiences

The Baroque in Architectural Culture, 1880-1980 Andrew Leach, John Macarthur, 2016-03-09 In his landmark volume *Space Time and Architecture* Sigfried Giedion paired images of two iconic spirals Tatlin s Monument to the Third International and Borromini s dome for Sant Ivo alla Sapienza The values shared between the baroque age and the modern were thus encapsulated on a single page spread As Giedion put it writing of Sant Ivo Borromini accomplished the movement of the whole pattern from the ground to the lantern without entirely ending even there And yet he merely groped towards that which could be completely effected in modern architecture achieving the transition between inner and outer space The intellectual debt of modern architecture to modernist historians who were ostensibly preoccupied with the art and architecture of earlier epochs is now widely acknowledged This volume extends this work by contributing to the dual projects of the intellectual history of modern architecture and the history of architectural historiography It considers the varied ways that historians of art and architecture have historicized modern architecture through its interaction with the baroque a term of contested historical and conceptual significance that has often seemed to shadow a greater contest over the historicity of modernism Presenting research by an international community of scholars this book explores through a series of cross sections the traffic of ideas between practice and history that has shaped modern architecture and the academic discipline of architectural history across the long twentieth century The editors use the historiography of the baroque as a lens through which to follow the path of modern ideas that draw authority from history In doing so the volume defines a role for the baroque in the history of architectural historiography and in the history of modern architectural culture
