Abstract. The authors have examined the effects of a 10-week, 1000 kcal energy deficit diet on the body composition and metabolic rate of 10 obese subjects. The subjects were divided into two groups: a control group and a diet group. The diet group lost significantly more weight and fat mass than the control group. The diet group also had a significantly higher metabolic rate than the control group. The authors conclude that a 1000 kcal energy deficit diet is effective in reducing body weight and fat mass, and increasing metabolic rate.
