Descartes boldly claimed I think therefore I am But one might well ask Why do we think How When and why did our human ancestors develop language and culture In other words what makes the human mind human Evolution of Mind Brain and Culture offers a comprehensive and scientific investigation of these perennial questions Fourteen essays bring together the work of archaeologists cultural and physical anthropologists psychologists philosophers geneticists a neuroscientist and an environmental scientist to explore the evolution of the human mind the brain and the human capacity for culture The volume represents and critically engages major theoretical approaches including Donald's stage theory Mithen's cathedral model Tomasello's joint intentionality and Boyd and Richerson's modeling of the evolution of culture in relation to climate change

No recent publication combines this breadth of evidential and theoretical perspective. The essays range in topic from the macroscopic the evolution of social cooperation to the microscopic examining genetic data to infer evolutions in brain structure and function and from the ancient paleoanthropological reconstructions of hominin cognitive abilities to the modern including modern hominin similarities to our primate cousins. Considered together these essays constitute a fascinating detailed look at what makes us human. PMIRC volume 5

The Medicalized Body and Anesthetic Culture Brent Dean Robbins, 2018-04-03 This book examines how modern medicine's mechanistic conception of the body has become a defense mechanism to cope with death anxiety. Robbins draws from research on the phenomenology of the body, the history of cadaver dissection and empirical research in terror management theory to highlight how medical culture operates as an agent which promotes anesthetic consciousness as a habit of perception. In short, modern medicine's comportment toward the cadaver promotes the suppression of the memory of the person who donated their body. This suppression of the memorial body comes at the price of concealing the lived experiential body of patients in medical practice. Robbins argues that this style of coping has influenced Western culture and has helped to foster maladaptive patterns of perception associated with experiential avoidance, diminished empathy, death denial and the dysregulation of emotion.

Tool Use in Animals Crickette M. Sanz, Josep Call, Christophe Boesch, 2013-03-07 The last decade has witnessed remarkable discoveries and advances in our understanding of the tool using behaviour of animals. Wild populations of capuchin monkeys have been observed to crack open nuts with stone tools similar to the skills of chimpanzees and humans. Corvids have been observed to use and make tools that rival in complexity the behaviours exhibited by the great apes. Excavations of the nut cracking sites of chimpanzees have been dated to around 4-5 thousand years ago. Tool Use in Animals collates these and many more contributions by leading scholars in psychology, biology and anthropology along with supplementary online materials into a comprehensive assessment of the cognitive abilities and environmental forces shaping these behaviours in taxa as distantly related as primates and corvids.

Origins of Language Sverker Johansson, 2005-02-17 Sverker Johansson has written an unusual book on language origins with its emphasis on empirical evidence rather than theory building. This is a book for the student or researcher who prefers solid data and well supported conclusions over speculative scenarios. Much that has been written on the origins of language is characterized by hypothesizing largely unconstrained by evidence. But empirical data do exist and the purpose of this book is to integrate and review the available evidence from all relevant disciplines not only linguistics but also e.g. neurology, primatology, paleoanthropology and evolutionary biology. The evidence is then used to constrain the multitude of scenarios for language origins demonstrating that many popular hypotheses are untenable. Among the issues covered: 1 Human evolutionary history 2 Anatomical prerequisites for language 3 Animal communication and ape language 4 Mind and language 5 The role of gesture 6 Innateness 7 Selective advantage of language 8 Proto language

The Body as Material Culture Joanna R. Sofaer, 2006-02-16 Bodies intrigue us. They promise windows into the past that other

archaeological finds cannot by bringing us literally face to face with history Yet the body is also highly contested Archaeological bodies are studied through two contrasting perspectives that sit on different sides of a disciplinary divide On one hand lie science based osteoarchaeological approaches On the other lie understandings derived from recent developments in social theory that increasingly view the body as a social construction Through a close examination of disciplinary practice Joanna Sofaer highlights the tensions and possibilities offered by one particular kind of archaeological body the human skeleton with particular regard to the study of gender and age Using a range of examples she argues for reassessment of the role of the skeletal body in archaeological practice and develops a theoretical framework for bioarchaeology based on the materiality and historicity of human remains

Evolutionary Biology and Conservation of Titis, Sakis and Uacaris Adrian Barnett, 2013-04-11 The first detailed collation of the evolution ecology and conservation of some of South America's least known and most endangered primates
