

Forces and Motion

Acceleration is a change in velocity over time. It can be calculated using force and mass. Acceleration will flow into the equation triangle.

Complete the following table:

	1	2	3	4	5
Force (N)	10	20	30	40	50
Mass (kg)	2	3	4	5	6
Acceleration (m/s ²)					

Write the equation for acceleration in the box:

Velocity-time graphs can be used to calculate acceleration using the gradient. Calculate the acceleration between 4 & 8:

How do we work out the distance travelled using a graph? Calculate it for the above:

Complete the graphs to show what we would expect to see:

Constant Velocity **Constant Acceleration** **Constant Deceleration**

A force applied to an object such as a spring will result in the object stretching and making elastic potential energy. Complete the table:

Force (N)	10	20	30	40	50
Extension (m)	1.2	2.4	3.6	4.8	6.0
Spring Constant (N/m)					

Draw lines and make the graphs to show a spring with a high and low spring constant.

What does elastic limit mean?

What is the maximum force that can be applied to a spring without it becoming permanently deformed?

What equation is used to calculate velocity? Calculate the velocity between 4 & 8:

Advanced Motion Control and Navigation of Robots in Extreme Environments Allahyar Montazeri, Nargess Sadeghzadeh-Nokhodberiz, Khoshnam Shojaei, Kaspar Althoefer, 2024-11-20 Advances in robotics and autonomous systems have opened new horizons for the scientists by creating new opportunities to explore extreme environments that would previously not have been possible For example robots that are deployed to study environmental processes such remote volcanos monitor the climate variables under the adverse weather conditions understand underground mines and explore deep oceans which are all inaccessible or hazardous for the human Industrial applications can also often be situated in extreme environments such as offshore oil and gas and nuclear industries In such applications the autonomous robot is expected to complete tasks such as repair and maintenance exploration reconnaissance inspection and transportation which is either done in isolation or as a team of cooperative robots Due to the harsh and severe conditions of such environments designing an advanced robotic system that can endure them is a challenging task The robot needs to cope with the time varying restricted uncertain and unstructured nature of the environment to achieve the planning and execution of the tasks This in turn demands development of advanced robust and adaptive motion control and navigation algorithms along with

machine learning and deep learning algorithms with high cognitive capability for the robot to perceive the surrounding environment effectively The use of both single and multi robot platforms can be advantageous depending on the specific application and environment
