2. Two – one in the wall of the alveolus, and one in the wall of the capillary.

Think like a scientist: Why are air sacs so small?

1. The dye moving (diffusing) into the jelly is like oxygen moving (diffusing) into the blood.
2. Learners should find that the dye diffuses more quickly into the jelly when there are many small holes. Some learners may be able to relate this to surface area, and explain that many small holes have more surface in contact with the jelly than a few large holes.
3. Learners may or may not think this is a good model. Accept any sensible suggestions. For example, both the dye and oxygen move by diffusion; the dye is a liquid, whereas oxygen is gas; blood moves past the alveoli, but in this experiment the jelly does not move.
