Smart Sustainable Development: Exploring Innovative Solutions and

Sustainable Practices for a Resilient Future Terri-Ann Berry, Leopoldo Mendoza-Espinosa, Jo Burgess, Ferdinand Oswald, 2025-06-17. United Nations Sustainable Development Goals (SDGs) serve as a blueprint to address the world's most pressing challenges such as poverty, inequality, climate change, and biodiversity loss. Research plays a pivotal role in understanding these complex issues, providing evidence-based insights to guide policy formulation, program development, and implementation strategies. Smart sustainable development refers to an innovative, forward-thinking, and/or technologically advanced approach that combines innovative solutions with sustainable practices to promote long-term environmental, social, and economic well-being. This Research Topic has been created in collaboration with an international event comprising online and face-to-face opportunities to highlight practical solutions to sustainability in line with the United Nations SDGs. This presents a unique opportunity for a wide range of sustainable practitioners from academia, industry, and communities to present research works and projects with an innovation focus, enabling international networking and knowledge sharing to support a more sustainable and inclusive future. This Research Topic seeks to investigate both complete or ongoing projects introducing innovative solutions that are strongly aligned with the UN SDGs and have led to tangible outcomes with remarkable impact and benefit to sustainable development. The key aspects contributing to smart sustainable development include technological integration, environmental stewardship, social equity, economic prosperity, resilient communities, and infrastructure and collaboration and governance. We welcome contribution from individual researchers, academic groups, and partnerships between academics and professionals. Research focused on using innovation to bridge the gap between global aspirations and local realities, taking into account diverse cultural, social, economic, and environmental contexts, is particularly welcome. Topics can cover but are not limited to the following themes: Smart technologies to further sustainable development including in built environment, biotechnologies, energy systems, health care, education, transportations, and emergency and

disaster risk management Sustainable infrastructure including policies creative design and the implementation of new methods materials and approaches to the planning construction and use of sustainable buildings water and wastewater management stormwater design and solid waste management Digitalization and intelligence for the uptake of sustainable solutions including through smart energy systems mobility digital transformation and disruption resilience and disaster management and the growth of digital cities Community and healthcare solutions to benefit gender equality community development indigenous peoples and the preservation of local region and national cultural heritage in new ways Nature resource protection and management approaches including environmental conservation water sensitive design coastal erosion systems solutions and adaptation to climate change Sustainable agricultural initiatives to increase the uptake and use of new approaches and methods including ones which incorporate creative solutions to supporting natural ecosystems

Bibliography of Agriculture with Subject Index ,1993-03 **Report of the Chief of the Bureau of Plant Industry**

 Sridaran Rajagopal,Kalpesh Popat,Divyakant Meva,Sunil Bajaja,Pankaj Mudholkar,2025-04-21 The six volume set CCIS 2424 2429 constitutes the refereed proceedings of the Third International Conference on Advances in Smart Computing and Information Security ASCIS 2024 held in Rajkot Gujarat India in October 16 18 2024 The 138 full papers and 43 short papers presented in these six volumes were carefully reviewed and selected from 667 submissions The papers presented in these six volumes are organized in the following topical sections Part I II III IV Artificial Intelligence Network and Cloud Computing Part VI Cyber Security Computer Application for Sustainability **Heterosis** R. Frankel,2013-06-29 When trying to solicit authors for this book it became apparent that the causal factors for heterosis at the physiological and biochemical level are today almost as obscure as they were 30 years ago Though biometrical genetical analyses point to dispersion of complementary genes not overdominance as the major cause of the phenomenon plant breeders experience still suggests a cautious pragmatic approach to the dominance overdominance controversy in breeding hybrid cultivars Thus we are faced

with a striking discordance between our limited comprehension of the causal factors and mechanism of heterosis on the one hand and the extensive agricultural practice of utilization of hybrid vigor on the other. Such utilization is the result of the economic value of hybrid combinations displaying superior yields and qualities as well as stability of performance of benefits derived in breeding programs and of the enhanced varietal protection of proprietary rights. No comprehensive and critical analysis of the phenomenon of heterosis in economic plants has been published for the last three decades since the now classical book *Heterosis* edited by J. W. Gowen, Iowa State College Press, Ames, Iowa, 1952. The present book attempts to fill the gap and to assess the status of our present knowledge of the concept, the basis, the extent and the application of heterosis in economic plants.

Agricultural Informatics Amitava Choudhury, Arindam Biswas, Manish Prateek, Amlan Chakrabarti, 2021-04-06. Despite the increasing population, the Food and Agriculture Organization of the United Nations estimates 70% more food will be needed in 2050 than was produced in 2006. Issues related to food production have yet to be completely addressed. In recent years, Internet of Things technology has begun to be used to address different industrial and technical challenges to meet this growing need. These Agro IoT tools boost productivity and minimize the pitfalls of traditional farming which is the backbone of the world's economy. Aided by the IoT, continuous monitoring of fields provides useful and critical information to farmers, ushering in a new era in farming. The IoT can be used as a tool to combat climate change through greenhouse automation, monitor and manage water, soil and crops, increase productivity, control insecticides, pesticides, detect plant diseases, increase the rate of crop sales, cattle monitoring, etc. *Agricultural Informatics Automation Using the IoT and Machine Learning* focuses on all these topics including a few case studies and they give a clear indication as to why these techniques should now be widely adopted by the agriculture and farming industries.
