Sir Banister Fletcher s Global History of Architecture is the acknowledged classic reference work for architectural history It has been essential reading for generations of architects and students since the first edition was published in 1896 and this tradition continues today as the new 21st edition provides the most up to date authoritative and detailed account of the global history of architecture available in any form Thousands of major buildings from around the world are described and explained accompanied by over 2 200 photographs plans and drawings Architectural styles and traditions are placed within a clear framework and the chronological and geographical arrangement of the work s 102 chapters allows for easy comparative analysis of cultural contexts resources and technologies *Carbon Societies* Peter Wagner, 2024-05-30 The

climate crisis is humanmade Its main cause is the burning of fossil fuels To combat climate change we have to understand how we arrived at where we are This book explores the reasons why human societies have embarked on the trajectory of ever increasing use of fossil fuels Population growth desire for freedom from want and profit seeking all played major roles in shaping human history but there has been no inevitable drive towards heating up the atmosphere in the pursuit of social objectives To sustain a growing population more natural resources are required but their use does not need to generate climate change No logic of modernity links freedom with a kind of material abundance that requires the burning of fossil fuels No logic of capital necessarily ties the search for profit to the extraction of fossil resources Examining the critical junctures in human history when resource regimes changed this book identifies the social problems that were meant to be solved by burning fossil fuels and the power hierarchies that shaped the decisions to use them Wagner argues that the key choices that led to the climate emergency were made relatively recently during the second half of the 20th century they are close enough in time for us to undo the prevailing social logic of fossil fuels By redefining the key problems that humankind is facing and reshaping the existing mechanisms of power we can take the decisive action needed to reduce our dependence on fossil fuels and avert the worst consequences of climate change

Performance Cultures and Doped Bodies Jesper

Andreasson, April Henning, 2021-06-30 Why has doping both as a practice and a social phenomenon been approached largely as a question of context sport or fitness Individuals may use substances to enhance sporting performance or within the framework of gym and fitness culture to create a perfect body But clearly people who dope are not bound to a singular context It is quite the opposite as individuals weave between and move across various settings in their trajectories to and from doping as goals identities ambitions and lifestyles change over time Still these stark categorizations often made in

public discourse and reinforced by scholars have continued to ignore these lived experiences and limited our understanding of doping Building on data gathered through ethnographic fieldwork studies of online doping communities and in depth case studies this book embraces the challenge of moving beyond traditional and historical doping dichotomies such as those of sport or fitness online or offline pleasure or harm masculinity or femininity and health or harm and in a sociologically informed analysis it develops new terminology to understand trajectories to and from doping It argues there are multiple ways to understand doped bodies and doping practices and that we must approach these questions from the perspective of both and rather than either or By imploding these divisions it offers updated and nuanced ways of both empirically and theoretically rethinking doping use and experiences attached to the practice
