$$6. \frac{4}{5}(3v-2w) - \frac{1}{5}(7v-2w)$$

$$\frac{12v}{5} - \frac{8w}{5} - \frac{7v}{5} + \frac{2w}{5}$$

$$\boxed{+v - \frac{6w}{5}}$$

Solve each equation or inequality.

$$7. 5t + 8 = 88$$

$$5t = 80$$

Linear Algebra Richard C. Penney, 2015-10-21 Praise for the Third Edition This volume is ground breaking in terms of mathematical texts in that it does not teach from a detached perspective but instead looks to show students that competent mathematicians bring an intuitive understanding to the subject rather than just a master of applications Electric Review A comprehensive introduction Linear Algebra Ideas and Applications Fourth Edition provides a discussion of the theory and applications of linear algebra that blends abstract and computational concepts With a focus on the development of mathematical intuition the book emphasizes the need to understand both the applications of a particular technique and the mathematical ideas underlying the technique The book introduces each new concept in the context of an explicit numerical example which allows the abstract concepts to grow organically out of the necessity to solve specific problems The intuitive discussions are consistently followed by rigorous statements of results and proofs Linear Algebra Ideas and Applications Fourth Edition also features Two new and independent sections on the rapidly developing subject of wavelets A thoroughly updated section on electrical circuit theory Illuminating applications of linear algebra with self study questions for additional study End of chapter summaries and sections with true false questions to aid readers with further comprehension of the presented material Numerous computer exercises throughout using MATLAB code Linear Algebra Ideas and Applications Fourth Edition is an excellent undergraduate level textbook for one or two semester courses for students majoring in mathematics science computer science and engineering With an emphasis on intuition development the book is also an ideal self study reference

Affine Algebraic Geometry: Geometry Of Polynomial Rings Masayoshi Miyanishi, 2023-12-05 Algebraic geometry is more advanced with the completeness condition for projective or complete varieties Many geometric properties are well described by the finiteness or the vanishing of sheaf cohomologies on such varieties For non complete varieties like affine algebraic varieties sheaf cohomology does not work well and research progress used to be slow although affine spaces and polynomial rings are fundamental building blocks of algebraic geometry Progress was rapid since the Abhyankar-Moh-Suzuki Theorem of embedded affine line was proved and logarithmic geometry was introduced by Iitaka and Kawamata Readers will find the book covers vast basic material on an extremely rigorous level
