Statistical Benchmarks for Quantum Transport in Complex Systems Mattia Walschaers, 2018-07-31 This book introduces a variety of statistical tools for characterising and designing the dynamical features of complex quantum systems These tools are applied in the contexts of energy transfer in photosynthesis and boson sampling In dynamical quantum systems complexity typically manifests itself via the interference of a rapidly growing number of paths that connect the initial and final states The book presents the language of graphs and networks providing a useful framework to discuss such scenarios and explore the rich phenomenology of transport phenomena As the complexity increases deterministic approaches rapidly become intractable which leaves statistics as a viable alternative

Energy Transfers in Atmosphere and Ocean Carsten Eden,Armin Iske,2019-01-23 This book

describes a recent effort combining interdisciplinary expertise within the Collaborative Research Centre Energy transfers in atmosphere and ocean TRR 181 which was funded by the German Research Foundation DFG Energy transfers between the three dynamical regimes small scale turbulence internal gravity waves and geostrophically balanced motion are fundamental to the energy cycle of both the atmosphere and the ocean Nonetheless they remain poorly understood and quantified and have yet to be adequately represented in today s climate models Since interactions between the dynamical regimes ultimately link the smallest scales to the largest ones through a range of complex processes understanding these interactions is essential to constructing atmosphere and ocean models and to predicting the future climate To this end TRR 181 combines expertise in applied mathematics meteorology and physical oceanography This book provides an overview of representative

specific topics addressed by TRR 181 ranging from a review of a coherent hierarchy of models using consistent scaling and approximations and revealing the underlying Hamiltonian structure a systematic derivation and implementation of stochastic and backscatter parameterisations an exploration of the dissipation of large scale mean or eddying balanced flow and ocean eddy parameterisations and a study on gravity wave breaking and mixing the interaction of waves with the mean flow and stratification wave wave interactions and gravity wave parameterisations to topics of a more numerical nature such as the spurious mixing and dissipation of advection schemes and direct numerical simulations of surface waves at the air sea interface In TRR 181 the process oriented topics presented here are complemented by an operationally oriented synthesis focusing on two climate models currently being developed in Germany In this way the goal of TRR 181 is to help reduce the biases in and increase the accuracy of atmosphere and ocean models and ultimately to improve climate models and climate predictions

Imprecision in Decision Making and Decision Support: New Challenges, Solutions and Perspectives Krassimir T. Atanasov, Vassia Atanasova, Janusz Kacprzyk, Andrzej Kaluszko, Maciej Krawczak, Jan W. Owsinski, Sotir Sotirov, Evdokia Sotirova, Eulalia Szmidt, Slawomir Zadrozny, 2020-06-26 This book gathers selected papers from two important conferences held on October 24-28, 2018 in Warsaw, Poland: the Fifteenth National Conference of Operational and Systems Research BOS 2018, one of the leading conferences in the field of operational and systems research not only in Poland but also at the European level; and the Seventeenth International Workshop on Intuitionistic Fuzzy Sets and General Nets IWIFSGN 2018, one of the premiere conferences on fuzzy logic. The papers presented here constitute a fair and comprehensive representation of the topics covered by both BOS 2018 and IWIFSGN 2018, including extensions of the traditional fuzzy sets, in particular on the intuitionistic fuzzy sets, as well as other topics in uncertainty and imprecision modeling: the Generalized Nets (GNs), a powerful extension of the traditional Petri net paradigm; and InterCriteria Analysis, a new method for feature selection and analyses in multicriteria and multi-attribute decision making problems. The Workshop was dedicated to the memory of Professor Beloslav Riečan (1936-2018), a regular participant at the IWIFSGN workshops. *Matrix and Operator Equations and Applications* Mohammad Sal Moslehian, 2023-07-29 This book concerns matrix and operator equations that are widely applied in various disciplines of science to formulate challenging problems and solve them in a faithful way. The main aim of this contributed book is to study several important matrix and operator equalities and equations in a systematic and self-contained fashion. Some powerful methods have been used to investigate some significant equations in functional analysis, operator theory, matrix analysis, and numerous subjects in the last decades. The book is divided into two parts: I Matrix Equations and II Operator Equations. In the first part, the state of the art of systems of matrix equations is given, and generalized inverses are used to find their solutions. The semi-tensor product of matrices is used to solve quaternion matrix equations. The contents of some chapters are related to the relationship between matrix inequalities, matrix means, numerical range, and matrix equations. In addition, quaternion algebras and their applications are employed in solving some famous matrix equations like Sylvester, Stein, and Lyapunov equations. A chapter devoted to studying Hermitian polynomial matrix equations, which frequently arise from linear quadratic control problems. Moreover, some classical and recently discovered inequalities for

matrix exponentials are reviewed In the second part the latest developments in solving several equations appearing in modern operator theory are demonstrated These are of interest to a wide audience of pure and applied mathematicians For example the Daugavet equation in the linear and nonlinear setting iterative processes and Volterra Fredholm integral equations semicircular elements induced by connected finite graphs free probability singular integral operators with shifts and operator differential equations closely related to the properties of the coefficient operators in some equations are discussed The chapters give a comprehensive account of their subjects The exhibited chapters are written in a reader friendly style and can be read independently Each chapter contains a rich bibliography This book is intended for use by both researchers and graduate students of mathematics physics and engineering

Problems and New Solutions in the Boolean Domain Bernd Steinbach, 2016-04-26 The Internet of Things is a great new challenge for the development of digital systems In addition to the increasing number of classical unconnected digital systems more people are regularly using new electronic devices and software that are controllable and usable by means of the internet All such systems utilize the elementariness of Boolean values A Boolean variable can carry only two different Boolean values FALSE or TRUE 0 or 1 and has the best interference resistance in technical systems However a Boolean function exponentially depends on the number of its variables This exponential complexity is the cause of major problems in the process of design and realization of circuits According to Moore's Law the complexity of digital systems approximately doubles every 18 months This requires comprehensive knowledge and techniques to solve complex Boolean problems This book summarizes both new problems and solutions in the Boolean domain in solving such issues Part 1 describes powerful new approaches in solving exceptionally complex Boolean problems Efficient methods contribute to solving problems of extreme complexity New algorithms and programs utilize the huge number of computing cores of the Graphical Processing Unit and improve the performance of calculations by several orders of magnitude Part 2 represents several applications of digital systems Due to the crucial role of the internet both solutions and open problems regarding the security of these systems are discussed The exploration of certain properties of such systems leads to a number of efficient solutions which can be reused in a wide field of applications Part 3 discusses the scientific basis of future circuit technologies investigating the need for completely new design methods for the atomic level of quantum computers This part also concerns itself with reversible circuits as the basis for quantum circuits and specifies important issues regarding future improvements
