

## Study Guide: Answer Key

### Chapter 7: DNA Structure and Replication

*Biologically Unique: How DNA helped free an innocent man*

#### Driving Question 1:

What is the function of DNA, and how is DNA organized in cells?

#### Why should you care?

DNA is the hereditary molecule—passed from parents to offspring—that serves as the instruction manual for “building” each individual. DNA is found in the nucleus of almost every cell in our body. Forensic scientists can, therefore, collect DNA evidence from many different types of crime scene evidence, such as semen, saliva, skin cells, blood, and hair. This DNA can then be used to positively identify a perpetrator or exonerate accused suspects of a crime.

Roy Brown was convicted by junk science; the only “evidence” linking him to the crime was his teeth, and bite mark analysis is notoriously unreliable. Other types of physical evidence, such as hair samples examined under a microscope, are also problematic because they are not distinct enough to positively identify the individual from which they come. DNA is valuable in forensics because it is unique to each individual. DNA’s structure is the key to its uniqueness in each individual.

#### What should you know?

To fully answer this Driving Question, you should be able to:

1. Describe the origin and function of DNA.
2. Describe the location of DNA in eukaryotic cells.
3. Describe the structure of chromosomes.
4. Describe the number and origin of the chromosomes in human cells.

#### Infographic Focus:

The infographics most pertinent to the Driving Question are 7.1 and 7.2.

#### Test Your Vocabulary:

Match these terms to their definitions:

[DEOXYRIBONUCLEIC ACID (DNA)] The molecule of heredity, common to all life forms, that is passed from parents to offspring.

[CHROMOSOME] A single, large DNA molecule wrapped around proteins.

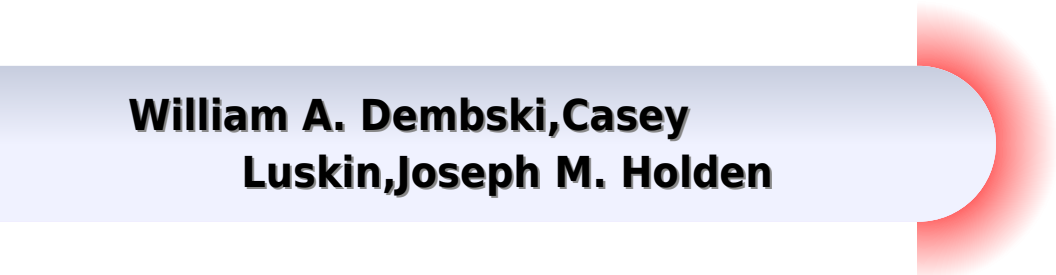

Chromosomes are located in the nuclei of most eukaryotic cells.

[NUCLEOTIDES] The building blocks of DNA. Each nucleotide consists of a sugar, a phosphate, and a base. The sequence of nucleotides (As, Cs, Gs, Ts) along a DNA strand is unique to each person.

1. Describe the origin and function of DNA.

**Hindu Perspectives on Evolution** C. Mackenzie Brown, 2012-01-19 Providing new insights into the contemporary creationist evolution debates this book looks at the Hindu cultural religious traditions of India the Hindu Dharma traditions By focusing on the interaction of religion and science in a Hindu context it offers a global context for understanding contemporary creationist evolution conflicts and tensions utilizing a critical analysis of Hindu perspectives on these issues The cultural and political as well as theological nature of these conflicts is illustrated by drawing attention to parallels with contemporary Islamic and Buddhist responses to modern science and Darwinism The book explores various

ancient and classical Hindu models to explain the origin of the universe encompassing creationist as well as evolutionary but non Darwinian interpretations of how we came to be Complex schemes of cosmic evolution were developed alongside creationist proofs for the existence of God utilizing distinctly Hindu versions of the design argument After examining diverse elements of the Hindu Dharmic traditions that laid the groundwork for an ambivalent response to Darwinism when it first became known in India the book highlights the significance of the colonial context Analysing critically the question of compatibility between traditional Dharmic theories of knowledge and the epistemological assumptions underlying contemporary scientific methodology the book raises broad questions regarding the frequently alleged harmony of Hinduism the eternal Dharma with modern science and with Darwinian evolution in particular

O'Callaghan,2022-01-17 There are many ways of understanding the reality of the world we live in and experience Science philosophy art all offer us ample descriptions explanations and intuitions But Christian believers go beyond all that for they attempt to understand the origins of the universe in terms of the creation of the world by God Revelation tells us what God had in mind when he made the world ex nihilo without presuppositions of any kind God s Gift of the Universe attempts to present the principal elements and stages of creation theology The doctrine is to be found fundamentally of course in Scripture both Old and New Testament which describes the world in the light of God s word Yet since God actually gave existence to the world down to the last detail our reflection on God s word not only explains the reality of creation how it works its nature as science does It also explains how creation came into being in the mind and heart of the Triune God and ultimately why God created the world In God s Gift of the Universe a considerable effort has been spent throughout the book on the Christological and Trinitarian aspects of creation particularly in the theology of Church Fathers Creation is presented besides in a deeply eschatological key for God created the world for purpose of making his glory eternally manifest The book also considers the way God intervenes in the life of the created world through conservation in being and providence The meaning of time matter and spirit are considered The need for ecological awareness is central One aspect of the mystery of creation that receives special attention is the presence of evil in the world This is of particular importance once we accept that God made the world whole and entire thus assuming responsibility for the world as it is The origin of evil through the sin of spiritual creatures provides the ultimate though not the only explanation of the mystery of evil Particular consideration is given to the reality of original sin **Videodisc Correlatn GD Modern Biology 99** Holt Rinehart & Winston,1998-02
