Knowledge and Data Management in GRIDs Domenico Talia, Angelos Bilas, Marios D. Dikaiakos, 2007-02-15 Data and knowledge play a key role in both current and future GRIDs. The issues concerning representation, discovery and integration of data and knowledge in dynamic distributed environments can be addressed by exploiting features offered by GRID Technologies. Current research activities are leveraging the GRID for the provision of generic and domain specific solutions and services for data management and knowledge discovery. *Knowledge and Data Management in GRIDs* is the third volume of the CoreGRID series and brings together scientific contributions by researchers and scientists working on storage, data and knowledge management in GRID and Peer to Peer systems. This volume presents the latest GRID solutions and research results in key areas of knowledge and data management such as distributed storage management, GRID databases, Semantic GRID and GRID aware data mining. *Knowledge and Data Management in GRIDs* is designed for a professional audience composed of researchers and practitioners in industry. This book is also suitable for graduate level students in computer science.

Advances in Marine and Freshwater Monitoring to support Aquatic Ecosystem Conservation and Restoration Elisabetta Manea, Caterina Bergami, Robert Ptacnik, 2023-11-13 Conserving and restoring freshwater and marine ecosystems are priorities addressed by several European and global conservation initiatives. Many management and conservation initiatives have been put in place to support the achievement of declared national and global conservation and sustainability goals. Nonetheless, the extent to which all these initiatives can provide lasting positive effects on conservation and restoration targets is often impaired, limited by the lack of robust baseline data and systematic monitoring, which in turn are constrained by the limited number of long term monitoring programs and limited dedicated funding. This collection underlines the importance of monitoring in times of global change and shifting baselines and the urgency of boosting conservation strategies to ensure progression towards meeting global conservation objectives. Emphasis is given also to the socio-ecological contexts and dimensions of conservation efforts and the potential of societal engagement in monitoring practices as a key enabling factor to turn conservation initiatives into practical actions and ecosystem protection. **Index Medicus**, 2001
