3 Look for an answer that:

- is written entirely in the learner's own words, rather than copied from the text in the Learner's Book or elsewhere
- mentions each part in the correct sequence
- gives a brief description of each part.

### Topic 1.2 Gas exchange

#### Exercise 1.2 Gas exchange

- 1 The entries should be arranged in order of either decreasing or increasing body mass. For example:

| Mammal | Body mass in g | Total surface area of air sacs in m <sup>2</sup> |
|--------|----------------|--------------------------------------------------|
| human  | 80 000         | 70                                               |
| sheep  | 68 000         | 60                                               |
| fox    | 20 000         | 40                                               |
| rabbit | 1000           | 2                                                |
| rat    | 300            | 0.8                                              |
| mouse  | 20             | 0.1                                              |

- 2 The larger the body mass, the larger the total surface area of the air sacs. Learners might also add that the relationship is not proportional.
- 3 The larger an animal is, the more oxygen it will need, because it will contain more cells that are all respiring and using up oxygen. Having a larger surface area of air sacs enables more oxygen to diffuse into the body at the same time, which helps to supply the demands of the respiring cells. A similar argument could be put forward relating to the need to get rid of carbon dioxide produced by the respiring cells.

### Topic 1.3 Breathing

#### Exercise 1.3A Measuring lung volumes

- 1 Use the measuring cylinder to measure a known volume of water – say 50 cm<sup>3</sup>. Pour the water into the bottle and mark its level as representing 50 cm<sup>3</sup>. Repeat with another known volume – say another 50 cm<sup>3</sup> – and mark its level as 100 cm<sup>3</sup>. Keep doing this until they reach the top.
