MOP Connection: Waves: sublevels 2 and 3

1. A wave is introduced into a medium and a snapshot of the medium at a particular instant in time is shown at the right. Several positions along the medium are labeled. Categorize the positions as either crests or troughs.

Crests: _____ Troughs: _____ Neither: _____

2. The wavelength of the wave in the diagram below is given by letter _____ and the amplitude of the wave in the diagram below is given by letter _____.

3. A sine curve that represents a transverse wave is drawn below. Use the centimeter ruler to measure the wavelength and amplitude of the wave (show units).

a. Wavelength = _____

b. Amplitude = _____

4. The number of cycles of a periodic wave per unit time is called the wave's _____.
5. Any repeated and periodic motion can be described by a frequency. For instance, the frequency of rotation of a second hand on a clock is _____.
- a. 1/60 Hz b. 1/12 Hz c. 1/2 Hz d. 1 Hz e. 60 Hz
6. A pendulum makes 40 vibrations in 20 seconds. Calculate its period?

Throughout this unit, internalize the meaning of terms such as period, frequency, wavelength and speed. Utilize the meaning of these terms to answer conceptual questions; avoid formula fixation.

Nonlinear Ocean Waves and the Inverse Scattering Transform Alfred Osborne, 2010-04-07 For more than 200 years the Fourier Transform has been one of the most important mathematical tools for understanding the dynamics of linear wave trains *Nonlinear Ocean Waves and the Inverse Scattering Transform* presents the development of the nonlinear Fourier analysis of measured space and time series which can be found in a wide variety of physical settings including surface water waves internal waves and equatorial Rossby waves This revolutionary development will allow hyperfast numerical modelling of nonlinear waves greatly advancing our understanding of oceanic surface and internal waves Nonlinear Fourier analysis is based upon a generalization of linear Fourier analysis referred to as the inverse scattering transform the fundamental building block of which is a generalized Fourier series called the Riemann theta function Elucidating the art and science of implementing these functions in the context of physical and time series analysis is the goal of this book Presents techniques and methods of the inverse scattering transform for data analysis Geared toward both the introductory and advanced reader venturing further into mathematical and numerical analysis Suitable for classroom teaching as well as research

Solar Cells and Their Applications Lewis M. Fraas, Larry D. Partain, 2010-10-29 A major update of solar cell technology and the solar marketplace Since the first publication of this important volume over a decade ago dramatic changes have taken place with the solar market growing almost 100 fold and the U S moving from first to fourth place in the world market as analyzed in this Second Edition Three bold new opportunities are identified for any countries wanting to improve market position The first is combining pin solar cells with 3X concentration to achieve economic competitiveness near term The second is charging battery powered cars with solar cell generated electricity from arrays in surrounding areas including the car owners homes while simultaneously reducing their home electricity bills by over ninety percent The third is formation of economic unions of sufficient combined economic size to be major competitors In this updated edition feed in tariffs are identified as the most effective approach for public policy Reasons are provided to explain why pin solar cells outperform more traditional pn solar cells Field test data are reported for nineteen percent pin solar cells and for 500X concentrating systems with bare cell efficiencies approaching forty percent Paths to bare cell efficiencies over fifty percent are described and key missing program elements are identified Since government support is needed for new technology prototype integration and qualification testing before manufacturing scale up the key economic measure is identified in this volume as the electricity cost in cents per kilowatt hour at the complete installed system level rather than just the up front solar cell modules costs in dollars per watt This Second Edition will benefit technologists in the fields of solar cells and systems solar cell researchers power systems designers academics studying microelectronics semiconductors and solar cells business students and investors with a technical focus and government and political officials developing public policy

Explorations in Ethics David Kaspar, 2020-09-01 Explorations in Ethics is a collection of essays with a speculative bent Its twelve contributors attempt to take ethics thinking in new directions Ethics is fundamentally a speculative discipline We sometimes lose sight of that because of our current scholarly practices which include reliance on a set of traditional works in ethics deferring to the scholarly literature drawing from the evidential sources afforded us This volume breaks the mold It is committed first and foremost to exploring new ground in a methodologically sound way whilst respecting and building on the literature where needed The contributors range from world renowned ethicists to early career scholars The ethical standpoints represented are various and the overall aim of this collection is to stimulate fresh thinking **Low-Frequency Waves in Space Plasmas** Andreas Keiling, Dong-Hun Lee, Valery Nakariakov, 2016-04-04 Low frequency waves in space

plasmas have been studied for several decades and our knowledge gain has been incremental with several paradigm changing leaps forward In our solar system such waves occur in the ionospheres and magnetospheres of planets and around our Moon They occur in the solar wind and more recently they have been confirmed in the Sun s atmosphere as well The goal of wave research is to understand their generation their propagation and their interaction with the surrounding plasma Low frequency Waves in Space Plasmas presents a concise and authoritative up to date look on where wave research stands What have we learned in the last decade What are unanswered questions While in the past waves in different astrophysical plasmas have been largely treated in separate books the unique feature of this monograph is that it covers waves in many plasma regions including Waves in geospace including ionosphere and magnetosphere Waves in planetary magnetospheres Waves at the Moon Waves in the solar wind Waves in the solar atmosphere Because of the breadth of topics covered this volume should appeal to a broad community of space scientists and students and it should also be of interest to astronomers astrophysicists who are studying space plasmas beyond our Solar System
