

MEMO for Ecology theory test

Question 1

1.1 Soil erosion is the removal and deposition of soil particles through the action of water and wind. (2)

1.2 Causes of accelerated erosion: human activity such as deforestation, agriculture, urban development, industrialisation and overgrazing. All these activities remove the vegetation layer on the soil surface. This exposes the bare soil to rain, wind (5)

1.3 Rill erosion is the removal of soil which occurs when runoff water forms small channels as it concentrates down a slope. (3)

Gully erosion is the removal of soil erosion by a concentrated water flow large enough to form channels or gullies. It is an advanced stage of land degradation.

OR during formation of rill erosion, sediments and water concentrates in small ditches/channels which increase in size as sediments eat away at the sides forming gully erosion. (3)

1.4 Plants assist in combating soil erosion

- Plants slow down water as it flows over the land and this allows much of the rain to soak into the ground.
- Plant roots hold the soil in position and prevent it from being blown or washed away.
- Plants break the impact of a raindrop before it hits the soil, reducing the soil's ability to erode.
- Protect the soil against wind , this improves moisture retention status of the soil
