Pharmacokinetic-Pharmacodynamic Modeling and Simulation Peter L. Bonate, 2006-05-14 A natural hierarchy exists in pharmacokinetic pharmacodynamic modeling culminating in population pharmacokinetic models which are a specific type of nonlinear mixed effects model The purpose of this book is to present through theory and example how to develop pharmacokinetic models both at an individual and population level In order to do so however one must first understand linear models and then build to nonlinear models followed by linear mixed effects models and then ultimately nonlinear mixed effects models This book develops in that manner each chapter builds upon previous chapters by first presenting the theory and then illustrating the theory using published data sets and actual data sets that were used in the development of new chemical entities collected by the author during his years in industry A key feature of the book is the process of modeling Most books and manuscripts often present the final model never showing how the model evolved In this book all examples are presented in an evolutionary manner

Biogeography Glen MacDonald, 2002-02-28 Biogeography illustrates how environment space and time interact to control the large scale distribution of organisms This book can be used for these courses which can be offered in either department This title includes the key concepts related to the study of vegetation and animal distributions and the human impact on these

Prakasa Rao, 2011-07-05 Stochastic processes are widely used for model building in the social physical engineering and life sciences as well as in financial economics In model building statistical inference for stochastic processes is of great importance from both a theoretical and an applications point of view This book deals with Fractional Diffusion Processes and statistical inference for such stochastic processes The main focus of the book is to consider parametric and nonparametric inference problems for fractional diffusion processes when a complete path of the process over a finite interval is observable Key features Introduces self similar processes fractional Brownian motion and stochastic integration with respect to fractional Brownian motion Provides a comprehensive review of statistical inference for processes driven by

fractional Brownian motion for modelling long range dependence Presents a study of parametric and nonparametric inference problems for the fractional diffusion process Discusses the fractional Brownian sheet and infinite dimensional fractional Brownian motion Includes recent results and developments in the area of statistical inference of fractional diffusion processes Researchers and students working on the statistics of fractional diffusion processes and applied mathematicians and statisticians involved in stochastic process modelling will benefit from this book **Bayesian Theory**

José M. Bernardo, Adrian F. M. Smith, 2009-09-25 This highly acclaimed text now available in paperback provides a thorough account of key concepts and theoretical results with particular emphasis on viewing statistical inference as a special case of decision theory Information theoretic concepts play a central role in the development of the theory which provides in particular a detailed discussion of the problem of specification of so called prior ignorance The work is written from the authors s committed Bayesian perspective but an overview of non Bayesian theories is also provided and each chapter contains a wide ranging critical re examination of controversial issues The level of mathematics used is such that most material is accessible to readers with knowledge of advanced calculus In particular no knowledge of abstract measure theory is assumed and the emphasis throughout is on statistical concepts rather than rigorous mathematics The book will be an ideal source for all students and researchers in statistics mathematics decision analysis economic and business studies and all branches of science and engineering who wish to further their understanding of Bayesian statistics
